 *Whose story is it?*
Personalizing story generation by inferring author styles

Abstract

Personalization has become essential for improving user experience in interactive writing and educational applications, yet its potential in story generation remains largely unexplored. In this work, we propose a novel two-stage pipeline for *personalized story generation*. Our approach first infers an author’s implicit story-writing characteristics from their past work and organizes them into an Author Writing Sheet that is inspired by narrative theory. The second stage uses this sheet to simulate the author’s persona through tailored persona descriptions and personalized story writing rules. To enable and validate our approach, we construct *Mythos*, a dataset of 590 stories from 64 authors across 5 distinct sources that reflect diverse story-writing settings. A head-to-head comparison with a non-personalized baseline demonstrates our pipeline’s effectiveness in generating high-quality personalized stories. Our personalized stories achieve a 75% win rate (versus 14% for the baseline and 11% ties) in capturing authors’ writing style based on their past works. Human evaluation highlights the high quality of our Author Writing Sheet and provides valuable insights into the personalized story generation task. Notable takeaways are that writings from certain sources, such as Reddit, are easier to personalize than others, like AO3, while narrative aspects, like Creativity and Language Use, are easier to personalize than others, like Plot.

 github.com/Nish-19/Persona-Story-Gen

1 Introduction

Personalizing the outputs of large language models (LLMs) has promising applications for role-playing in chatbots and video games (Tseng et al., 2024; Chen et al., 2024), as well as providing personalized feedback in education (Stahl et al., 2024; Li et al., 2024b; Makridis et al., 2024). However, story-writing personalization, a crucial writing system feature that can assist users in overcoming

writer’s block or help second-language learners adapt to a new language (Yuan et al., 2022; Yeh et al., 2024), remains largely unexplored.

To address this gap, we systematically explore how to personalize LLM outputs based on individual authors’ previous writings. We propose a novel two-stage pipeline for personalized story generation, as shown in Figure 1. In the first stage, we construct an *Author Writing Sheet* to capture implicit writing characteristics from an author’s past writings (Sun et al., 2025, 2024; Ramos et al., 2024). We categorize story-writing characteristics into four fine-grained narrative dimensions: Plot, Creativity, Development, and Language Use (Pavis, 1998; Card, 1999; Noble, 1994; Huot et al., 2024). Each characteristic is represented as a Claim-Evidence pair, where general statements about the author’s writing behavior are supported by specific story excerpts. This approach, inspired by Common Core Standards in English Language Arts (Association et al., 2010) and recent work in writing education (Li et al., 2023), provides a structured and grounded way to identify an author’s distinctive writing patterns, as validated via our human evaluation (Section 3). In the second stage, we implement *Personalized Story Generation* by having LLMs role-play authors based on their Writing Sheet. Our method uses persona prompts and story rules as user constraints to guide the generation.

To enable and validate our approach, we construct *Mythos*, a dataset of 590 stories from 64 authors (≈ 1500 tokens) across five sources with distinct writing settings: Reddit, AO3, Storium, Narrative Magazine, and New Yorker. The dataset splits each author’s works chronologically into two sets: an earlier *Profiling* set used to infer their writing characteristics, and a later *Generation* set used to evaluate how well LLMs can emulate their distinctive writing behavior (Salemi et al., 2024).

We evaluate personalized stories in two ways: First, we use automatic evaluation with LLM-as-a-

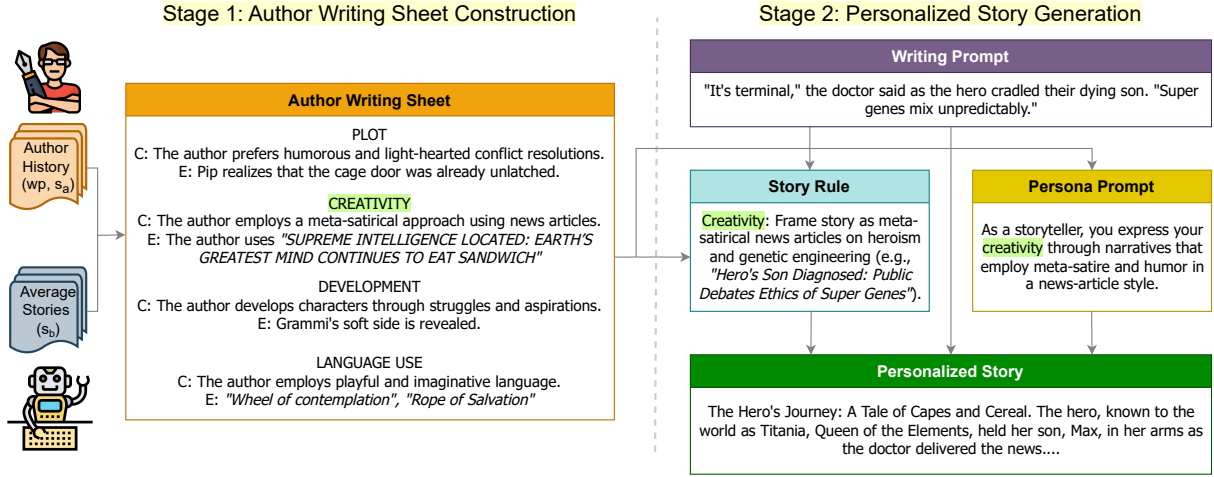

Figure 1: Our two-stage pipeline for personalized story generation. Stage 1 constructs an Author Writing Sheet with Claim (C) and Evidence (E) pairs capturing the author’s story-writing characteristics across narrative categories. It is derived from the author’s history of writing prompts (w_p), author-written stories (s_a), and LLM-generated Average Stories (s_b) representing a typical author’s response to the same prompt. Stage 2 uses the Author Writing Sheet to role-play the author, incorporating tailored story rules and a persona description for personalized generation.

judge, to assess faithfulness to the author’s writing history and similarity to ground truth author writings, along with traditional metrics for lexical overlap, story diversity, and style similarity. Second, we conduct a human evaluation to assess the generated story’s similarity to the author’s ground-truth writings. We find that stories generated using Author Writing Sheets demonstrate clear advantages over a non-personalized baseline approach. When evaluated by LLMs, personalized stories have 61% higher faithfulness to the author writing history. Human annotators prefer these stories by an 18% absolute margin in terms of similarity to ground truth. Our personalization approach is especially effective for Reddit content and for capturing Creativity, and Language Use characteristics, with less pronounced impact on Plot (Tian et al., 2024; Xu et al., 2024). In summary, our contributions are:

- **Mythos**: A novel dataset containing multiple stories written by the same authors, designed to support both author profiling and personalized story generation evaluation.
- **Author Writing Sheet**: A structured approach to capturing an author’s writing behavior based on past works, grounded in narrative theory and educational practices and validated through human evaluation.
- **Personalized Story Generation**: A method for generating stories in an author’s style using Author Writing Sheets, rigorously evaluated through automated and human assessments, demonstrating its superiority over baselines.

2 Dataset Collection and Description

To facilitate our analysis of *personalized* story generation, we ensemble *Mythos*, a novel dataset consisting of 590 stories written by 64 authors. To the best of our knowledge, *Mythos* is the first dataset that identifies and connects multiple stories written by the same author. See Table 1 for comparison with existing datasets.

Data Sources: We include five diverse story-writing sources, namely (1) **Reddit**, featuring stories from r/WritingPrompts, a widely-used resource for amateur story-writing research (Fan et al., 2018), (2) **AO3**, featuring fanfiction based on popular franchises such as *Harry Potter* and *Sherlock Holmes*, (3) **Storium**, featuring collaborative stories (Akoury et al., 2020), (4) **N.Magazine**, featuring professionally polished stories by authors such as Barry Gifford, and finally (5) **New Yorker**, featuring expert-level storytelling from renowned authors such as Haruki Murakami.

Preprocessing: To ensure high-quality and diverse content, we impose constraints on word length (ranging from 500 to 1500 words), limit publication dates to post-November 2023, and exclude explicit material. To standardize formatting, non-Reddit stories are supplemented with writing prompts generated by GPT-4o and manually reviewed for accuracy. Stories are split chronologically based on their submission timestamps, with 70% used for *profiling* writing characteristics and

30% for *generation* (see Appendix A for details).

Dataset size: Our dataset is limited in size due to data crawling policies that restrict large-scale data collection for analysis¹. We note that recent storywriting datasets such as TELL ME A STORY (Huot et al., 2024) and TTCW (Chakrabarty et al., 2024) have conducted analyses on a comparable number of stories (Table 1).

3 Author Writing Sheet

Motivated by the connection between writing education and personalization (Li et al., 2023), we propose a novel method to infer implicit story-writing characteristics of authors based on their history in the profiling set P . We group these characteristics into four narrative categories: Plot, Creativity, Development, and Language Use, inspired by narrative theory (Pavis, 1998; Card, 1999; Noble, 1994; Huot et al., 2024), to assess fine-grained, multi-dimensional story-writing attributes:

- **Plot:** Story structure, conflict introduction, prompt engagement, and resolution.
- **Creativity:** Genre blending, unconventional prompt reinterpretation, and unique elements.
- **Development:** Character depth, emotional arcs, and immersive settings.
- **Language Use:** Diction, style, rhetorical devices, pacing, and dialogue.

Inspired by Common Core (CC) Standards in English Language and Arts (Association et al., 2010), each characteristic is represented as a Claim-Evidence pair, where the Claim summarizes the author’s writing style, and Evidence consists of excerpts from the author-written story to justify the Claim. These characteristics are organized into an *Author Writing Sheet* (Gurung and Lapata, 2024).

Stage 1 in Figure 1 (and Algorithm 1 in the Appendix) illustrates our method for generating the Author Writing Sheet by iteratively processing each story in an author’s profiling set. For a given writing prompt (w_{pt}) and corresponding author-written story (s_{at}), we use an LLM (LLM_{avg}) to generate an *average story* (s_{bt}). Since LLMs are pre-trained on large-scale text data from the web, this average story simulates a typical author’s response based on source-specific stylistic patterns (see *Average Author*). We prompt an LLM (LLM_{sheet}) to compare the average and author-written stories and generate Claim-Evidence pairs

for each narrative category to form an intermediate Author Writing Sheet A'_t , which captures how the author’s writing characteristics deviate from those of a typical author for that source (Shashidhar et al., 2024; Krishna et al., 2020).

To construct the final Author Writing Sheet $A_{|P|}$, we iteratively merge each intermediate Author Writing Sheet A'_t with the aggregated sheet from prior stories A_{t-1} , maintaining a moving update similar to (Chang et al., 2023). During merging, we prompt an LLM ($LLM_{combine}$) to integrate A'_t into A_{t-1} by grouping equivalent Claims within each narrative category, selecting the best Evidence for grouped Claims, and retaining ungrouped Claims with their respective Evidence. To improve clarity, the updated sheet includes a timestamp identifier for each Evidence corresponding to the story it belongs to and also limits each narrative category to 10 Claim-Evidence pairs, prioritizing grouped Claims. For LLM_{avg} , LLM_{sheet} , and $LLM_{combine}$ we use GPT-4o prompted in a chain-of-thought manner with a temperature of 0.0 and a maximum output of 4096 tokens (Wei et al., 2022; Shashidhar et al., 2024).

Our method processes each story separately, making the update process efficient when new submissions are added (Yeh et al., 2024; Yuan et al., 2022). This method avoids the need to reprocess all previous stories, reducing computational cost and mitigating the limitations of long-context inputs in LLMs (Zhou et al., 2023; Magar and Schwartz, 2022; Li et al., 2024a). This approach draws parallels to *Knowledge Tracing* in education research, where a model continuously updates its understanding of a student’s progress without re-evaluating past interactions (Liu et al., 2022; Scarlatos and Lan, 2024). See Appendix B.1 for cost analysis.

Validating Author Writing Sheets: We conduct a human evaluation with three Upwork annotators (\$17/hour). Annotators assess the Claim-Evidence pairs based on two criteria: (1) whether the Claims can be reasonably inferred from the story (Yes/No) and (2) whether the Evidence supports the Claims (Yes/Partially/No). The study includes 42 authors spanning all five sources, each represented by one sampled story resulting in 188 annotated claims. Of these, 12 stories are annotated by all annotators to measure inter-rater agreement, while each annotator evaluates 10 additional exclusive stories. Results show unanimous agreement on the ‘Yes’ label for Claim inference and moderate agreement on Ev-

Table 1: Comparison of our dataset with existing story-writing datasets. ✗ indicates no Author IDs associated with stories, and ~ denotes having Author IDs but not having explicit links between them. Our dataset spans diverse settings and links stories by the same author, enabling research on personalized story generation.

Dataset Name	Size	Sources	Prompt Length	Story Length	Author IDs
WritingPrompts (Fan et al., 2018)	300K	Reddit	28	735	✗
TELL ME A STORY (Huot et al., 2024)	230	Writing Workshop	113	1498	✗
MirrorStories (Yunusov et al., 2024)	1500	Aesop’s fables	40	400	✗
Storium (Akoury et al., 2020)	440k	Storium online platform	247	247	~
TTCW (Chakrabarty et al., 2024)	12	New Yorker	54	2000	~
<i>Mythos</i>	590	Reddit, AO3, Storium, N.Magazine, New Yorker	50	1517	✓

idence support (Krippendorff’s Alpha= .57), with 93% of Evidence fully supporting Claims and 7% providing partial support. These findings confirm the reliability and quality of the Author Writing Sheets and support their use in personalized story generation (see Appendix B.2 for more details).

4 Personalized Story Generation

Stage 2 of Figure 1 illustrates our proposed method for personalized story generation using the Author Writing Sheet.

To generate personalized stories, we prompt an LLM (LLM_{story}) with the writing prompt, story length (Chakrabarty et al., 2024), source-specific metadata (e.g., fanfiction for AO3), story rules as actionable instructions in direct second-person form (categorized into four narrative categories), and persona description obtained from the Author Writing Sheet. We experiment with four types of methods for personalized story generation: 1) A non-personalized baseline, *Average Author*; 2) Personalization baselines, *RAG* and *Delta*, that do not use the Author Writing Sheet; 3) Our proposed methods, *Writing Sheet* and *Writing Summary*; and 4) An *Oracle* method that loosely resembles the upper bound performance. We detail each method type below. See Appendix C for the prompts.

Non-Personalized - Average Author: The *Average Author* method serves as a non-personalized baseline that reflects the average behavior of authors, acquired during an LLM’s pre-training process. Specifically, for each given source, we prompt an LLM to generate stories using an Average Author prompt that describes typical writing characteristics for the given story source obtained using audited GPT-4o prompting² (Wang et al., 2024).

²We ask GPT-4o for the typical writing characteristics for the story source and manually verify it.

For example, for AO3, the Average Author is defined as “respecting fandom tone and style while experimenting with established tropes, unconventional pairings, or alternative universes.”

Personalization Baselines

RAG: The Retrieval-Augmented Generation, *RAG* baseline (Salemi et al., 2024) first retrieves the most similar writing prompt and author-written story from the profiling set using BM25 (Robertson et al., 2009). We then use the retrieved pair as a one-shot demonstration (Wang et al., 2024) to elicit role-playing behavior from the LLM, mimicking the retrieved example’s style.

Delta: The *Delta* method generates personalized story rules by contrasting the *Average Author* story (see *Average Author*) with the corresponding author-written story for each writing prompt in the profiling set (Shashidhar et al., 2024). We then use *all* writing prompts in the profiling set, along with their corresponding generated story rules that are actionable instructions in direct second-person form, as few-shot demonstrations for the LLM, to generate personalized story rules for a new prompt in the generation set.

Proposed Method - Writing Sheet and Summary

Writing Sheet: Our *Writing Sheet* method uses the Author Writing Sheet (Section 3) to enable personalization (Stage 2 of Figure 1). First, we prompt an LLM (LLM_{persona}) to generate a persona description that summarizes the author’s story-writing style as a second-person narrative, included in the system prompt (Wang et al., 2024; Jiang et al., 2024). Second, we prompt an LLM (LLM_{rule}) to generate personalized story rules from the Author Writing Sheet tailored to the writing prompt in the generation set, included as constraints in the

user prompt (Pham et al., 2024). Additionally, we include a one-shot demonstration, following the approach described in RAG (Richardson et al., 2023).

Writing Summary: As an alternative to the Author Writing Sheet, the *Writing Summary* method leverages the LLM’s long-context capabilities (Ding et al., 2023) by packing all past stories from the profiling set as input. Specifically, we include them in a single input prompt to generate an *Author Writing Summary* in the same format as the Author Writing Sheet. Similar to the Writing Sheet method, persona descriptions, and story rules are derived from the Author Writing Summary and used as constraints for story generation, along with a one-shot demonstration.

Oracle: The *Oracle* method establishes an upper bound on personalization performance, in terms of similarity to the ground truth, by using Oracle story rules derived directly from the ground-truth author-written story for each writing prompt in the generation set. These rules are obtained by contrasting the *Average Author* with the ground-truth author story, following the same process as in *Delta*. Additionally, we include a one-shot demonstration, following the approach described in RAG.

5 Experiments

In this section, we describe the implementation details and evaluation methods.

5.1 Implementation Details

We prompt GPT-4o in a chain-of-thought manner (Wei et al., 2022; Shashidhar et al., 2024) with a temperature of 0.0 and a maximum token limit of 4096 to generate story rules for the *Delta* and *Oracle* methods, as well as for generating the Author Writing Sheet, Author Writing Summary, and their respective persona descriptions (LLM_{persona}) and personalized story rules (LLM_{rule}). For story generation (LLM_{story}) across all methods, including *Average Author*, we evaluate three models: GPT-4o (Bubeck et al., 2023), Llama 3.1 8B, and Llama 3.1 70B (Dubey et al., 2024), using a temperature of 0.7 and top_p of 0.95 (Wang et al., 2024) (See Appendix F for results using Llama models for story generation). Additionally, we implement an ablation variant of our proposed method for Writing Sheet and Writing Summary that excludes the persona description from the system prompt called *Writing Sheet nP* and *Writing Summary nP* respectively.

5.2 Automatic Evaluation

We evaluate the performance of personalized story generation using two automated evaluation methods: First, we use GPT-4o-as-a-judge which is shown to be a scalable way to approximate human judgments for complex open-ended tasks (Zheng et al., 2023) and calculate the win-rate of our personalization methods against the non-personalized method, *Average Author* on two aspects:

- **Faithfulness to Writing History:** We evaluate how well the generated story aligns with the author history by measuring win-rates using Claims from the *Author Writing Summary* as the ground-truth reference for each narrative category (Wang et al., 2024, 2023; Yunusov et al., 2024).
- **Similarity to Author Story:** We assess how closely the generated story matches the author’s ground-truth story by measuring win-rates using the ground-truth author story as the reference for each narrative category (Lyu et al., 2024; Shashidhar et al., 2024).

For both aspects, we prompt GPT-4o in a chain-of-thought manner (Wei et al., 2022) to assign scores (1–5) to stories. We randomly shuffle the order of compared pairs, one generated by a personalization method and the other by the *Average Author* method, to avoid biases. Scores are broken down into four narrative categories: Plot, Creativity, Development, and Language Use (Saha et al., 2024). The story with the higher score in a category is declared the winner, and the overall winner is based on the highest total score across all categories. Additionally, we evaluate personalization using traditional metrics (Xie et al., 2023) including lexical overlap, story diversity, and stylistic similarity (see Appendix D.2 for more details).

5.3 Human Evaluation

We conduct a human evaluation on a subset of our data to further assess subtext and identify any interesting insights that the LLM judges might have missed (Chakrabarty et al., 2024; Subbiah et al., 2024b), by comparing stories generated by personalization methods (*Delta*, *Writing Sheet*, *Writing Summary*) against the *Average Author* method for similarity to the ground-truth author story (Lyu et al., 2024). We ask annotators to justify their choices after making the comparison. Three annotators, recruited via Upwork (\$17/hour), evaluated 45 author stories in total (15 common to establish

agreement and 10 exclusive to each annotator to increase coverage of annotation (Song et al., 2024)). Each author story had three pairs, each containing a story from one personalization method, resulting in 135 annotated story pairs.

6 Results and Discussion

We now discuss our experimental results and findings.

6.1 Automatic Evaluation

Our automatic evaluation results show that, first, Writing Sheet and Summary consistently outperform other methods. Second, persona descriptions improve faithfulness to writing history but improve similarity to the ground truth only for select sources like Reddit. Third, personalization is more effective for sources like Reddit than AO3 and Storium, and for narrative categories like Creativity, and Language Use, compared to Plot.

6.1.1 Faithfulness to Writing History

Table 2 shows results for faithfulness to writing history using GPT-4o as LLM_{story} for our personalization methods. We observe the following:

Writing Sheet and Summary achieve best faithfulness to writing history: Writing Sheet and Summary achieve the highest win-rates across all sources, outperforming Average Author by 64%. The strong performance of the Writing Summary follows from its reliance on the Author Writing Summary as both a reference for evaluation and a generation constraint. Writing Sheet, despite not being explicitly conditioned on the Author Writing Summary, generalizes well, likely due to its format being the same as the Author Writing Summary. Oracle outperforms Delta and RAG, benefiting from direct conditioning on ground-truth story rules, which enhances adherence to the author’s writing history. However, Oracle underperforms the Writing Sheet and Summary, likely due to its lack of explicit conditioning on the Author Writing Summary. Another possible cause is that the author’s writing style possibly changes over time, which is not fully captured by the ground-truth story rules. See Appendix E.1 for an example.

Reddit shows the highest win-rates among sources: Reddit exhibits the highest win-rates across all methods, suggesting its stories are more conducive to personalization. This trend likely stems from Reddit’s crowd-sourced writing

prompts, where authors create prompts for others. Therefore, there are a range of diverse topics, ranging from power, survival, and mystery to humor and the supernatural. The broad thematic variety may have enabled personalization methods to capture distinct stylistic elements more effectively, resulting in higher win-rates (See the paragraph Themes in Appendix A).

Persona descriptions improve faithfulness to writing history: We see that adding persona descriptions in the system prompt for Writing Sheet and Summary improves win-rates by around 5% over their nP variants. This result likely follows from personas enhancing the LLM’s role-playing capabilities, allowing for a more faithful representation of the author’s writing style (Jiang et al., 2024; Wang et al., 2024; Wallace et al., 2024).

6.1.2 Similarity to Author Story

Table 3 shows results for similarity to the author story using GPT-4o as LLM_{story} for our personalization methods. We observe the following:

Writing Sheet and Summary outperform baselines of RAG and Delta: Oracle achieves the highest win-rates across all methods as its story rules come from the ground-truth author story. Reddit shows the highest Oracle win-rate (91%), followed by 65% on average for other methods, indicating easier personalization likely due to the broad thematic variety in the writing prompts. Writing Sheet and Summary outperform RAG and Delta by 11% and 6%, highlighting the benefit of summarizing the author’s writing history (Richardson et al., 2023).

Persona descriptions help in sources with broad thematic variety in writing prompts: Writing Summary with persona descriptions outperforms its nP variant by 9% across all sources. However, Writing Sheet shows no significant difference from its nP variant except for Reddit, where it surpasses it by 7%. This result suggests that persona descriptions enhance personalization in sources that are easier to personalize, such as Reddit, but have limited impact elsewhere (Zheng et al., 2024). The broad thematic variety in Reddit’s writing prompts creates a greater divergence between author styles and the Average Story, leading to more informative Author Writing Sheets and persona descriptions that further aid personalization. See Appendix E.2 for an example.

Table 2: Percentage win-rate for Faithfulness to Writing History evaluated by GPT-4o. Each cell ('X-Y') shows 'X' as the method win-rate and 'Y' as the Average Author win-rate, with ties as the remainder. Best win-rates for each source is underlined.

Source	Oracle	RAG	Delta	Writing Sheet	Writing Summary	Writing Sheet nP	Writing Summary nP
AO3	52-32	31-54	49-41	<u>74</u> -20	80-10	68-21	72-19
Reddit	74-21	35-56	58-26	<u>86</u> -7	<u>89</u> -7	74-19	72-19
Storium	50-40	42-45	45-42	68-15	<u>75</u> -8	<u>70</u> -20	68-20
N.Magazine	71-14	57-21	50-36	<u>79</u> -7	71-21	71-21	71-0

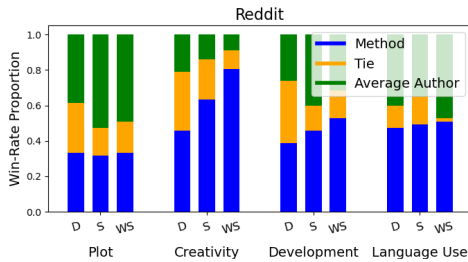

Figure 2: Win-rate of personalization methods vs. Average Author for Reddit across four narrative categories. D: Delta, S: Writing Summary, WS: Writing Sheet.

Creativity and Language Use are the easiest categories to personalize: Table 10 (in the Appendix) shows that Delta, Writing Summary, and Writing Sheet outperform Average Author in Creativity (23% higher) and Language Use (15% higher) (Huot et al., 2024), but perform worse in Plot and slightly worse in Development (Tian et al., 2024; Xu et al., 2024). Creativity and Language Use are less dependent on the writing prompt, making them easier to transfer across prompts, whereas Plot and Development are more closely tied to specific prompts, making generalization difficult, especially without thematic overlap.

To better understand personalization performance in Reddit, the easiest source to personalize, Figure 2 shows that Writing Sheet is the best-performing method across all categories, with a

35% advantage over Delta and 20% over Writing Summary in Creativity. Writing Sheet explicitly summarizes differences between the ground-truth author story and the Average Story, providing more informative guidance for personalization. This advantage is particularly evident in Creativity, which is less constrained by the writing prompt. See Appendix E.3 for plots of other data sources.

6.1.3 Traditional Metrics

Table 11 (in the Appendix) shows results with the traditional metrics.

Lexical Overlap and Diversity Metrics yield similar values: We observe that Lexical Overlap and Diversity metrics yield similar values, as all methods use the same generation model, leading to overlapping lexical distributions and limiting these metrics' ability to capture nuanced stylistic differences (Zheng et al., 2023; Xie et al., 2023).

Writing Sheet outperforms other methods, especially for Style metrics: We observe that Writing Sheet nP consistently performs best across all metrics, particularly in Style metrics for both Author History and Author Story, as measured by LUAR (Rivera-Soto et al., 2021). This improvement likely results from the Writing Sheet explicitly summarizing an author's stylistic deviations from an Average Author, enhancing personalization.

6.2 Human Evaluation

Table 3 shows win-rates from human evaluation (Section 5.3) under the Human Eval column, showing that personalization methods—Delta, Writing Sheet, and Summary—outperform the Average Author method by *18% points* absolute win-rate in terms of similarity to ground-truth writings. See Appendix G for details on experiment design, and qualitative examples.

Low inter-annotator agreement due to task subjectivity: Fleiss’ Kappa for inter-annotator agreement ranges from 0.2 to 0.4, indicating low but above-random agreement, likely due to the challenges of annotating long-form subjective texts (Subbiah et al., 2024a). Specifically, different annotators prioritize different narrative categories when determining which story in a pair better reflects the author’s style, leading to disagreement.

Sources like Reddit and New Yorker have better win-rates than others: Reddit and New Yorker achieve the highest win-rates, with Reddit benefiting from a broad thematic variety in writing prompts and New Yorker from advanced narrative devices like subtext, which humans assess more reliably than LLMs (Subbiah et al., 2024b). In contrast, AO3 and Storium exhibit lower win-rates due to LLMs’ familiarity with fanfiction tropes (AO3)³ and the lack of strong stylistic differentiation in Storium beyond its open-ended storytelling structure (Xu et al., 2024; Tian et al., 2024). These findings suggest that personalization is most effective when authors engage with diverse topics or possess distinct stylistic traits (such as complex narrative structures, creative elements, and advanced language use). These characteristics, reflected in their past writing history, provide clear signals for us to mimic their writing style.

Narrative categories like Creativity, and Language use are more conducive to personalization: Annotators favor personalized stories for Creativity, and Language Use, noting their stronger use of deeper symbolism, thematic richness, layered narratives, and expressive language. However, Average Author was preferred when personalized methods incorrectly introduce elements not present in the author’s ground-truth story, suggesting deviations from the author’s usual style.

7 Related Work

7.1 Personalization and Role-Playing

Recent works have introduced benchmark datasets for personalizing LLM outputs in tasks like email, abstract, and news writing, focusing on shorter outputs (e.g., 300 tokens for product reviews (Kumar et al., 2024) and 850 for news writing (Shashidhar et al., 2024)). These methods infer user traits from history for task-specific personalization (Sun et al., 2024, 2025; Pal et al., 2024; Li et al., 2023; Salemi et al., 2025). In contrast, we tackle the more subjective problem of long-form story writing, with author stories averaging 1500 tokens. Unlike prior role-playing approaches that use predefined personas (e.g., Tony Stark, Confucius) (Wang et al., 2024; Sadeq et al., 2024; Tu et al., 2023; Xu et al., 2023), we propose a novel method to infer story-writing personas from an author’s history to guide role-playing.

7.2 Story Understanding and Generation

Prior work on persona-aware story generation (Yunusov et al., 2024; Bae and Kim, 2024; Zhang et al., 2022; Chandu et al., 2019) defines personas using discrete attributes like personality traits, demographics, or hobbies. Similarly, (Zhu et al., 2023) explore story style transfer across pre-defined domains (e.g., fairy tales, martial arts, Shakespearean plays). In contrast, we mimic an individual author’s writing style based on their history. Our approach differs by (1) inferring long-form author personas—descriptions of an author’s style from their past works, rather than relying on demographics, and (2) handling long-form story generation, averaging 1500 tokens per output, exceeding typical story lengths in prior research.

8 Conclusion

We introduce the task of personalizing authors’ story-writing styles across five sources with a two-stage approach that infers implicit characteristics as an Author Writing Sheet to guide LLMs via persona descriptions and story rules. Evaluations show that summarizing an author’s history via a Writing Sheet or Summary improves faithfulness to writing history and similarity to the ground truth. Personalization is more effective for sources with diverse writing prompts and distinctive author traits (e.g., Reddit, New Yorker) and for narrative categories like Creativity and Language Use, which are less writing prompt-dependent.

9 Limitations

Limited Author History Size: Table 4 (70% of the Stories/Author column) shows that N.Magazine and New Yorker authors have an average of 3 stories in their profiling set, whereas Reddit and AO3 authors have around 10. A larger profiling set likely enables more accurate inference of an author’s story-writing characteristics, leading to improved personalization. However, the cognitive demands of writing long stories result in fewer stories per author available online, thereby limiting the scalability of personalized story generation research.

Author Writing Sheet Recall: We validate the precision of our Author Writing Sheet through human evaluation, ensuring that the Claim-Evidence pairs accurately describe the author’s story-writing style. However, we do not assess recall, i.e., whether *all* of the author’s story-writing characteristics are captured. Measuring recall is challenging due to the inherent subjectivity of the task, making it impractical to ask humans to independently construct Writing Sheets for comparison.

Multi-Agent Systems and Fine-Tuning LLMs: Our work explores role-playing for personalized story generation by prompting an LLM with tailored persona descriptions and story rules. Future research can extend this by incorporating multi-agent systems, where specialized agents focus on different narrative categories to enhance personalization (Huot et al., 2024; Bae and Kim, 2024). Additionally, fine-tuning LLMs to explicitly reason over author history could be investigated as a method for better aligning generated content with individual author preferences (Salemi et al., 2025; Shashidhar et al., 2024; Shaikh et al., 2024).

Automatic Evaluation Methods: Evaluating long-form text remains challenging for LLMs, particularly for creative outputs that involve nuanced aspects like subtext, which are difficult to assess automatically and often require human evaluation (Subbiah et al., 2024a).

10 Ethical Considerations

Both human evaluation tasks were approved by an institutional review board (IRB). All annotators, who are US-based and fluent in English, were informed of the nature of the research study, to which they provided informed consent, and were compen-

sated at an hourly rate of \$17, meeting the minimum wage requirements in our state. All scientific artifacts, including models and datasets, were used in accordance with their intended purpose to ensure ethical and responsible research practices.

All data used in this study were manually collected from publicly available sources⁴, adhering to the data usage and crawling policies of the respective websites. To comply with copyright constraints, we will release only the links to the stories used in this research, rather than the stories themselves, following the approach of (Chakrabarty et al., 2024).

Fully anonymizing our dataset is not feasible⁵ as the research involves mimicking specific authors’ writing behaviors. We note that even if the usernames are anonymized, it is still possible to infer an author’s publicly available identity from the story link. Therefore, for each author for every source, we release their usernames along with corresponding writing prompts, and author-written stories in the profiling and generation set of our dataset. However, the dataset remains limited in scale, and no additional metadata, including demographic information, is included, thereby reducing potential risks. To further mitigate unforeseen harms, the dataset will be released under an ****Educational or Academic Research, Non-Commercial Use**** license, following (Akoury et al., 2020).

⁴Permission was obtained from the authors of the Storium dataset for its inclusion in Mythos.

⁵Storium authors already anonymize their dataset.

A Dataset

In this section, we describe the details of the construction of our dataset which includes five distinct story-writing sources, Reddit⁶, AO3⁷, Storium⁸, N.Magazine⁹, and New Yorker¹⁰.

Selection Constraints: To ensure high-quality and diverse content, we apply several constraints during dataset collection. Stories are limited to a length of 500 to 1500 words. To avoid contamination by LLM pretraining data, only recent stories published after November 2023 are included for Reddit and AO3 (Zhou et al., 2023; Magar and Schwartz, 2022). Not-Safe-For-Work (NSFW) and explicit content is excluded using automatic tagging and manual verification. Additionally, we manually inspect all stories to remove elements that may reveal author identities, such as URLs and links to their public profiles on websites.

Enrichment with Writing Prompts: While Reddit stories include author-provided prompts, other sources do not; therefore, we augment them with GPT-4o-generated writing prompts to standardize the format across sources. We manually review all generated prompts and refine them when necessary. The prompt for generating writing prompts for the stories in our dataset can be found in Figure 3.

Dataset Splitting: Following (Salemi et al., 2024), we split each author’s stories chronologically based on their submission timestamps. The first 70% of an author’s stories form the *profiling* set, representing their historical writing, while the remaining 30% constitute the *generation* set, used for evaluating personalization methods.

Statistics and Comparisons: The dataset contains 590 stories from 64 authors, with an average story length of 1500 tokens. Detailed statistics are provided in Table 4. As shown in Table 1, our dataset uniquely combines diverse story-writing settings and provides connections that link stories written by the same author, distinguishing it from existing story-writing datasets that either lack Author IDs or do not establish such links.

Themes: Figure 4 shows the plots depicting the percentage-normalized frequency of the top 10

themes for each source. To derive these themes, we prompt GPT-4o with each writing prompt to generate up to five one-word themes. We then aggregate the themes across all writing prompts and compute the normalized frequency by dividing the count of each theme by the total number of themes for that source.

Overall, we observe that Reddit (Figure 4a), AO3 (Figure 4b), and Storium (Figure 4e) contain a higher prevalence of “conflict” themes, whereas N.Magazine (Figure 4c) and New Yorker (Figure 4d) focus more on family, loss, and identity. This distinction reflects the nature of story-writing settings across these sources: amateur stories tend to emphasize direct conflict resolution in their prompts, while expert-written stories explore deeper aspects of human relationships.

Among Reddit, AO3, and Storium, Reddit exhibits a flatter distribution with greater thematic diversity, spanning identity, power, survival, humor, adventure, magic, and the supernatural. In contrast, AO3 has a sharper distribution, dominated by recurring themes of relationships, friendships, love, family, and secrets, reflecting a more domestic story-writing setting. Storium also shows a sharper distribution but favors themes such as space, danger, leadership, and war, highlighting a preference for war-centric narratives in collaborative storytelling.

Table 4: Dataset statistics, including the total number of stories, profiling (Profile) and generation (Gen) set distribution, number of authors, average stories per author, and token length in words.

Dataset	Total Stories	Profile Size	Gen Size	Total Authors	Stories/Author	Token Length
AO3	239	159	80	17	14	1220
Reddit	170	113	57	12	14	1210
Storium	111	71	40	15	7	1120
N.Magazine	32	18	14	10	3	1745
NewYorker	38	22	16	10	4	1950
Overall	590	383	207	64	8	1517

B Author Writing Sheet

Algorithm 1 describes the process for generating the Author Writing Sheet.

Common Core Standards in English Language Arts:

The Author Writing Sheet is organized in the form of Claim-Evidence pairs describing an author’s story-writing characteristics inspired

⁶<https://www.reddit.com/r/WritingPrompts/>

Prompt for Writing Prompt Generation

System Prompt

You are a creative writing assistant skilled in crafting engaging and imaginative writing prompts. Your task is to analyze a provided story and create a concise, compelling prompt that fulfills the provided constraints.

User Prompt

- **Style Consistency:** Match the style of few-shot demonstrations.
- **Length:** Keep between 1-2 sentences.
- **Content:** Reflect key story elements (premise, characters, conflict) while fostering creativity.
- **Fictional Characters:** If mentioned in the story, include them where relevant.

Guidelines

- Ignite curiosity while leaving space for interpretation.
- Maintain tone and structure consistency with examples.
- Ensure prompts are open-ended and evocative, avoiding excessive specificity.
- Keep prompts simple, concise, and adaptable to diverse responses.
- Avoid step-by-step directions; inspire rather than instruct.
- Encourage exploration with broad, thought-provoking scenarios.
- Strive for uniqueness and memorability.

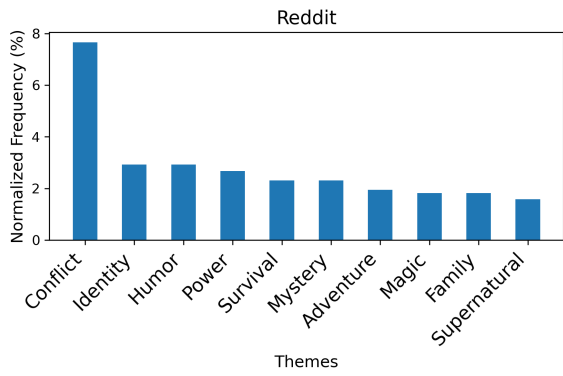

Goal Generate prompts that inspire diverse, unexpected, and imaginative narratives while maintaining consistency in tone and style. Each prompt should serve as an inviting starting point rather than a directive.

Notes

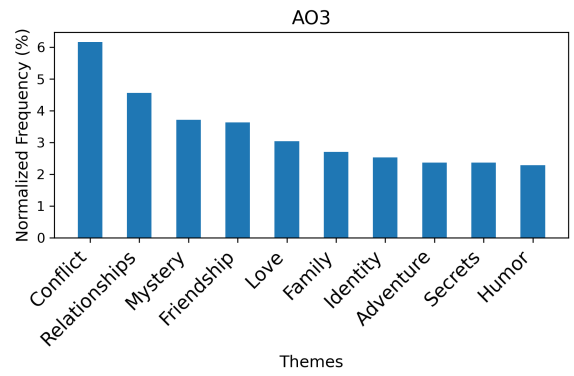

- Inspire creativity while allowing the writer to shape the journey.
- Balance being suggestive yet open-ended to encourage interpretation.
- Include fictional characters mentioned in the story to preserve context.

Few-Shot Examples We include few-shot examples here.

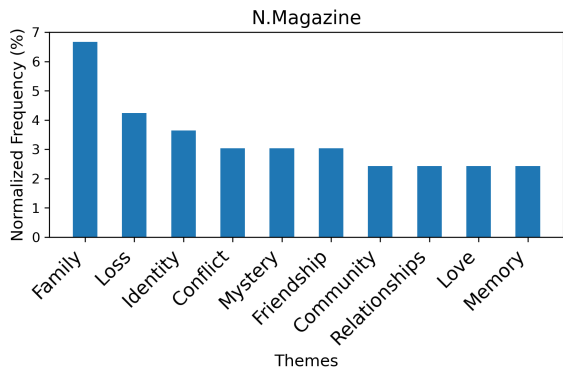

Figure 3: Prompt for generating writing prompts for the stories in our dataset.

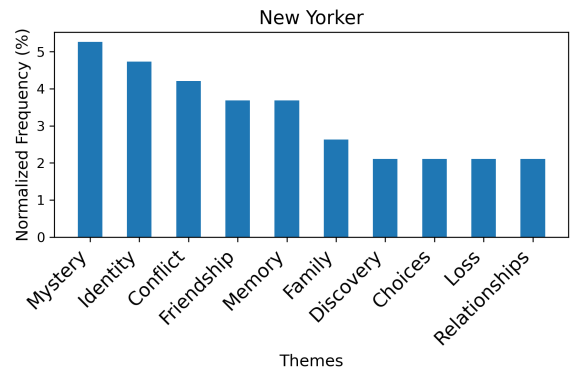

(a) Reddit

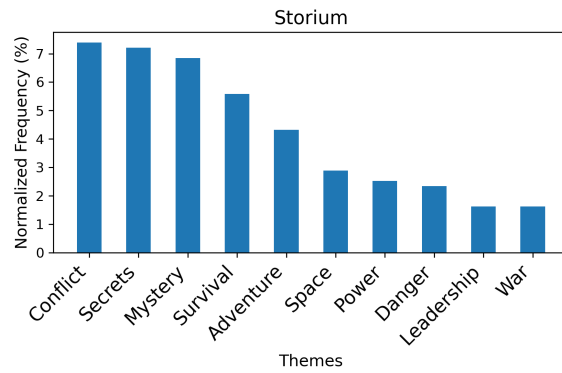

(b) AO3

(c) N.Magazine

(d) New Yorker

(e) Storium

Figure 4: Source-wise Percentage Normalized Frequency of the top 10 themes.

Algorithm 1: Constructing the Author Writing Sheet from a profiling set of stories

```

1 Input: profiling set
    $P = \{(wp_t, s_{at}) \mid t = 1, \dots, |P|\}$ ,
   where  $wp_t$  is the writing prompt and  $s_{at}$  is
   the author’s story at time-step  $t$ .
2 Output: Author Writing Sheet  $A_{|P|}$ 
   // Initialize Author Writing Sheet
3  $A_0 \leftarrow \emptyset$ 
4 for  $t = 1$  to  $|P|$  do
   // average story
5    $s_{bt} \leftarrow \text{LLM}_{\text{avg}}(wp_t)$ 
   // Intermediate Author Writing
   Sheet
6    $A'_t \leftarrow \text{LLM}_{\text{sheet}}(wp_t, s_{bt}, s_{at})$ 
   // Author Writing Sheet ( $A_t$ )
7    $A_t \leftarrow \text{LLM}_{\text{combine}}(A'_t, A_{t-1})$ 
   // Steps within combination:
8   Group equivalent Claims in
    $A'_t \cup A_{t-1}$  and select the best
   Evidence for each group.
9   Include ungrouped Claims from  $A'_t$ 
   and  $A_{t-1}$  with their Evidence as-is.
10 end
   // Final Author Writing Sheet.
11 return  $A_{|P|}$ 

```

by Common Core (CC) Standards¹¹ (Association et al., 2010). Specifically, it aligns with *RL-9-10.1*, which emphasizes citing strong textual evidence to support analysis, and *RL-9-10.2*, which focuses on determining central themes and summarizing texts. Additionally, *RL-9-10.4* highlights interpreting word choices and their impact on meaning and tone. In writing, *W.9-10.2* pertains to producing clear and well-structured informative texts, while *W.9-10.9* encourages drawing evidence from literary and informational texts to support analysis and research. These standards provide a structured framework for evaluating narrative elements such as plot, creativity, development, and language use within the Author Writing Sheet, ensuring a systematic and interpretable representation of an author’s unique storytelling style.

Prompts for generation: Average Author prompts are provided for AO3 (Figure 5), Reddit (Figure 6), Storium (Figure 7), Narrative Magazine

¹¹https://corestandards.org/wp-content/uploads/2023/09/ELA_Standards1.pdf

(Figure 8), and The New Yorker (Figure 9).

Figure 10 shows the prompt for generating the intermediate Author Writing Sheet ($\text{LLM}_{\text{sheet}}$ in Figure 1), while Figure 11 shows the prompt for generating the combined (and subsequently the final) Author Writing Sheet from the intermediate Author Writing Sheet ($\text{LLM}_{\text{combine}}$ in Figure 1).

Sample Author Writing Sheet: Table 5 shows a sample Author Writing Sheet for a Reddit author. It highlights story-writing characteristics such as a preference for light-hearted conflict resolution, a tendency to anthropomorphize animals, the use of a meta-satirical approach through a news article format, and the employment of playful and imaginative language, among other stylistic choices.

B.1 Cost Analysis of Author Writing Sheet

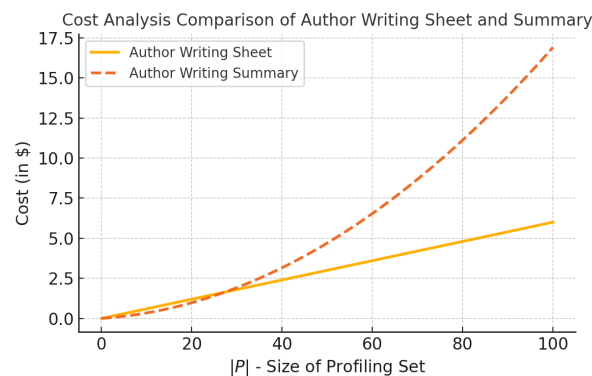

Figure 12: Cost analysis of generating the Author Writing Sheet and Summary using GPT-4o as a function of the profiling set size $|P|$ in an interactive writing setting where an author adds a new submission at each time step. For profiling set sizes where $|P| > 30$, generating the Author Writing Sheet is significantly more cost-effective than the Author Writing Summary.

In this section, we analyze the cost of generating the Author Writing Sheet (see Section 3) and compare it with the cost of generating the Author Writing Summary (see Writing Summary) as a function of the profiling set size ($|P|$) using GPT-4o. We calculate the average cost per sample (a writing prompt and its corresponding story) as $0.06\$$ for the Author Writing Sheet and $0.02\$$ for the Author Writing Summary considering $2.50\$$ per 1M tokens for input, and $10.00\$$ per 1M tokens for output¹².

In an interactive writing setting, where an author adds a new submission at each time step, the total cost of generating the Author Writing Sheet

¹²<https://openai.com/api/pricing/>

Average Author Prompt for AO3 Generation

System Prompt

You are a creative and engaged fanfiction writer, skilled in capturing the emotional depth, creativity, and character-driven storytelling that defines AO3 fanworks. Your goal is to write a compelling fanfiction narrative in response to the provided writing prompt. Embrace the transformative nature of fanfiction by reimagining canonical characters, events, or settings to explore new perspectives or emotional arcs. Focus on creating a story that resonates emotionally, respects the fandom's dynamics, and celebrates the collaborative and imaginative spirit of AO3.

User Prompt

Context of Writers

- Assume the author is an engaged and creative fanfiction writer, deeply familiar with the fandom and its dynamics.
- Writers often experiment with established tropes, unconventional pairings, or alternative universes (AUs) while maintaining a deep respect for the source material.
- Emulate the enthusiastic and emotionally rich style characteristic of fanfiction authors, blending canon with transformative elements to craft original, resonant narratives.

Stylistic Constraints

- **Fandom Tone and Style:** Incorporate a tone and style that reflect the spirit of the fandom, blending humor, drama, and introspection in a way that resonates with fanfiction readers.
- **Creative Use of Tags:** Make creative use of AO3's hallmark tagging system in the text (e.g., playful or meta references in dialogue that nod to fandom tropes or subgenres).
- **Balanced Dialogue and Prose:** Include dialogue and prose that balance heartfelt sincerity with occasional self-aware humor or meta-commentary, in line with fanfic traditions.

Semantic Constraints

- **Focus on Relationships:** Emphasize emotional bonds and character growth, whether through conflict, reconciliation, or celebration.
- **Transform Canonical Elements:** Explore canonical elements with a transformative twist (e.g., reinterpreting events, relationships, or character motivations from a new perspective).
- **Ground in Established Lore:** Ground the narrative in a specific fandom's established lore while allowing space for imaginative deviations or additions.

Figure 5: Average Author Prompt for AO3.

Average Author Prompt for Reddit Generation

System Prompt

You are a creative and enthusiastic storyteller, skilled in crafting imaginative and engaging short stories inspired by Reddit Writing Prompts (r/WritingPrompts). Your goal is to respond to the provided writing prompt by creating a story that is thought-provoking and conversational in tone, resonating with the online community. Use vivid descriptions, dynamic pacing, and approachable language to draw readers into the narrative. Ensure the story invites discussion and inspires others to explore the concept further.

User Prompt

Context of Writers

- Assume the author is an imaginative and enthusiastic storyteller who enjoys engaging directly with an online community of readers.
- Writers often experiment with bold, original ideas or explore twists on familiar concepts, showcasing their creativity and ability to captivate a diverse audience.
- Emulate the informal yet polished style common in *r/WritingPrompts*, blending accessibility with a strong sense of storytelling craft.

Stylistic Constraints

- **Conversational and Approachable Tone:** Maintain a conversational and approachable tone typical of Reddit Writing Prompts.
- **Balanced Descriptive Passages:** Balance descriptive passages with dialogue or internal monologue to keep the pacing engaging.
- **Direct and Vivid Language:** Avoid overly complex language; keep the style direct but vivid.
- **Reinforcement of Ideas:** Employ narrative devices like repetition or callbacks to reinforce central ideas or themes.

Semantic Constraints

- **Alignment with the Prompt:** Ensure the story directly aligns with and explores the central theme or scenario of the writing prompt.
- **Cohesive Narrative Development:** Build a clear, cohesive narrative that develops the implications of the prompt's concept.
- **Immersive Sensory Details:** Use immersive sensory details to enrich the reader's understanding of the protagonist's experiences and environment.
- **Open-Ended or Reflective Conclusion:** Conclude with an open-ended, reflective, or impactful note, leaving space for interpretation or further thought.

Figure 6: Average Author Prompt for Reddit.

Average Author Prompt for Storium

System Prompt

You are a skilled and collaborative storyteller, adept at crafting vivid and engaging opening scenes for Storium. Your goal is to create an immersive **Establishment** turn in response to the provided writing prompt. Set the stage for the story by establishing a richly detailed context, evoking emotional resonance, and introducing narrative intrigue. Ensure the scene provides a strong foundation while leaving space for other contributors to expand and build upon the narrative. Balance descriptive detail with open-ended elements to encourage creativity and collaborative storytelling.

User Prompt

Context of Writers

- Assume the author is a collaborative storyteller skilled in creating vivid, open-ended scenes designed to inspire and engage other contributors.
- Writers often set the tone for the story while leaving space for co-authors to introduce their own ideas, characters, and plot developments.
- Emulate the inclusive, immersive style typical of *Storium* story writing platform, where the opening turn encourages creativity and further contributions.

Stylistic Constraints

- **Set the Tone Appropriately:** Match the tone of the narrative to the writing prompt, whether it be adventurous, mysterious, or foreboding, using a consistent and engaging voice throughout.
- **Rich Descriptive Detail:** Employ vivid, sensory descriptions to establish the setting, characters, and atmosphere, enabling readers to visualize and immerse themselves in the story world.
- **Dynamic Sentence Structure:** Vary sentence lengths to reflect the pace and mood, using longer, flowing sentences for descriptions and shorter, punchy sentences for action or tension.
- **Establish Ambiguity or Suspense:** Drop subtle hints or unanswered questions to create intrigue and encourage curiosity about what happens next.

Semantic Constraints

- **Introduce the Setting:** Provide a clear depiction of the setting, whether it is a small trading post, a desert town, or a spaceship, and ensure its relevance to the writing prompt.
- **Outline the Context:** Clearly establish the circumstances that have led to the current scenario, including significant events or motivations.
- **Define Key Characters:** Introduce at least one or two central characters, highlighting distinctive traits or roles that will be important in the unfolding story.
- **Foreshadow the Central Conflict:** Allude to the main challenges or stakes introduced by the writing prompt.

Figure 7: Average Author Prompt for Storium .

Average Author Prompt for Narrative Magazine

System Prompt

You are an experienced and reflective writer, skilled in creating deeply personal and character-driven narratives in the style of Narrative Magazine. Your goal is to write a short story in response to the provided writing prompt, crafting a compelling and immersive piece. Focus on balancing introspection with vivid external details, and explore universal themes through the lens of individual experiences. Emphasize emotional resonance and thoughtful storytelling, ensuring the narrative engages readers with its depth and relatability.

User Prompt

Context of Writers

- Assume the author is an experienced writer skilled in creating rich, engaging narratives that weave together character introspection, dialogue, and evocative settings.
- Emulate the style of contributors to *Narrative Magazine*, who bring diverse storytelling techniques and voices to explore themes of identity, memory, conflict, and resilience.

Stylistic Constraints

- **Prompt as Foundation:** Anchor the story firmly in the writing prompt, using it to drive the plot and the protagonist's emotional arc.
- **Vivid Prose:** Use detailed descriptions to paint a clear picture of characters, settings, and actions while maintaining a natural flow.
- **Dynamic Characters:** Develop multi-dimensional characters with distinct voices and perspectives, revealed through dialogue, actions, and subtle internal reflections.
- **Balancing Action and Reflection:** Combine active plot progression with moments of introspection to create a layered, engaging narrative.
- **Realistic Dialogue:** Write dialogue that feels authentic and contributes to the development of characters and the story's themes.

Semantic Constraints

- **Specific and Relatable Setting:** Choose a setting that feels specific yet relatable, whether a small town, an urban street corner, or a domestic space, grounding the reader in the protagonist's world.
- **Exploration of Themes:** Build a narrative arc that explores themes of connection, discovery, or transformation, tying them back to the writing prompt in meaningful ways.
- **Rich Sensory Details:** Infuse the story with sensory details that make the setting and characters come alive, from the sounds of a bustling street to the quiet tension of a conversation.
- **Accessible Storytelling:** Avoid overly complex or abstract storytelling; ensure the narrative is accessible while leaving room for deeper interpretation.

Figure 8: Average Author Prompt for Narrative Magazine.

Average Author Prompt for New Yorker

System Prompt

You are an accomplished and literary writer, skilled in crafting nuanced and thought-provoking short fiction in the style of The New Yorker. Your goal is to write a short story in response to the provided writing prompt, focusing on the hallmarks of The New Yorker fiction: rich emotional layers, nuanced character development, and a refined, literary prose style. Emphasize subtlety and depth in your storytelling, using symbolic elements and understated resolutions to evoke reflection and emotional resonance in the reader.

User Prompt

Context of Writers

- Assume the author is an experienced and skilled writer, capable of exploring complex human experiences through subtle, layered storytelling.
- Emulate the style of well-regarded *New Yorker* contributors like Alice Munro, Haruki Murakami, or Raymond Carver, who excel in revealing depth through simplicity or ambiguity.

Stylistic Constraints

- **Engagement with the Prompt:** Respond directly to the writing prompt, ensuring the core premise drives the narrative.
- **Elegant Prose:** Use carefully crafted, precise language that balances sophistication with clarity.
- **Character-Driven Narratives:** Focus on character psychology, revealing emotional states through indirect actions, dialogue, or internal reflection.
- **Ambiguity and Subtlety:** Avoid explicit resolutions or explanations; allow readers to infer the meaning of events and relationships.
- **Symbolic Layers:** Incorporate elements from the prompt as symbols that evolve in significance throughout the story.

Semantic Constraints

- **Realistic and Detailed Environment:** Set the story in a realistic, detailed environment, using sensory descriptions to ground readers in the protagonist's world.
- **Internal or Interpersonal Conflict:** Introduce a central conflict or emotional tension that reflects internal or interpersonal struggles rather than overt, external drama.
- **Quiet but Profound Interactions:** Develop moments of quiet yet profound interaction between characters, often revealing deeper truths or contradictions.
- **Universal Themes:** Address universal themes like transition, isolation, or self-realization, tying them subtly back to the writing prompt.

Figure 9: Average Author Prompt for New Yorker.

Prompt for generating the Intermediate Author Writing Sheet

System Prompt

You are a sophisticated story analyst tasked with analyzing an author's story writing style by contrasting an author-written story with a base story, both written in response to the same writing prompt. Your goal is to identify and evaluate the unique elements and tendencies in the author's writing behavior. This analysis must focus on the distinctive ways the author interprets the writing prompt and shapes their narrative, as revealed through contrast with the base story.

Your analysis should also adhere to the Common Core Standards in English Language Arts, focusing on key skills such as analyzing textual evidence, evaluating an author's craft and structure, and assessing how stylistic choices influence meaning and tone. While grounded in these standards, your evaluation must highlight the specific, unique aspects of the author's writing style, including their recurring techniques, narrative preferences, and stylistic quirks. Your analysis should reflect close reading and objective interpretation, capturing the author's creative and stylistic distinctiveness in relation to the base story.

User Prompt

Input Details Writing Prompt | Author-Written Story | Base Story

Output Format Use `<thinking></thinking>` tokens for reasoning and summarization | Use `<writing_style></writing_style>` tokens for structured analysis | Structure analysis by categories | Each category contains independent claims supported by contextualized evidence

Guidelines for Claims Claims must reflect broad patterns in the author's style | Avoid repetition across categories | Maintain objectivity (do not reference "Author-Written Story" or "Base Story") | Ensure clarity and precision in claims

Guidelines for Evidence Draw evidence directly from the author-written story | Frame evidence using a descriptive phrase summarizing the writing prompt | Ensure coherence and logical alignment with the claim | Avoid over-extrapolation

Categories for Analysis Plot | Creativity | Development (Character and Setting) | Language Use

Special Instructions Generate a short descriptive phrase summarizing the writing prompt | Use `<thinking></thinking>` for reasoning and prompt framing | Structure output strictly within `<writing_style></writing_style>` tokens | Ensure uniqueness and non-redundancy of claims

Sample Output Structure

```
<thinking>
```

```
Deeply reason on how the Author-Written Story differs from the Base Story.
```

```
Think of a short descriptive phrase summarizing the prompt:
```

```
"the story regarding a battle for lost artifacts".
```

```
</thinking>
```

```
<writing_style>
```

```
### Plot
```

```
1. Claim about author's writing style.
```

```
    - Evidence: In the story regarding "writing prompt," story excerpt
```

```
...
```

```
Repeat for all categories.
```

```
</writing_style>
```

Figure 10: Prompt for generating the Intermediate Author Writing Sheet.

Prompt for generating the Combined Author Writing Sheet

System Prompt

You are a sophisticated story analyst tasked with synthesizing **Author Writing Sheets** from multiple stories written by a single author into a cohesive **Combined Author Writing Sheet**. The inputs provided include the **Previous Combined Author Writing Sheet** and the **Current Author Writing Sheet**.

Each **Author Writing Sheet** analyzes the author's storytelling style across four categories: **Plot**, **Creativity**, **Development (Character and Setting)**, and **Language Use**. The analysis consists of general claims about the author's story writing style followed by evidence supporting the claim, based on the stories written by the author.

Your goal is to combine insights from the previous sheet and the current sheet into a comprehensive representation of the author's storytelling style in the **Combined Author Writing Sheet**. The final sheet should consist of a list of independent claims about the author's storytelling style. Each claim must be followed by evidence and a corresponding story reference identifier indicating the story the evidence belongs to.

User Prompt

Instructions Analyze the provided sheets systematically | Identify recurring patterns and unique elements | Merge equivalent claims while preserving distinct insights | Ensure claims are concise, precise, and evidence-based

Algorithm (Merge Step) Group equivalent claims | Select the best representative evidence | Rewrite merged claims concisely | Retain unmerged unique claims | Limit to 10 claims per category

Categories for Analysis Plot | Creativity | Development (Character and Setting) | Language Use

Guidelines for Claims Claims should reflect broad writing tendencies | Maintain objectivity (do not reference previous or current sheets) | Ensure clarity, precision, and non-redundancy

Guidelines for Evidence Draw evidence directly from the author-written stories | Favor verbatim excerpts over paraphrases | Use a framing phrase with a short description of the writing prompt | Include the story reference identifier '[k]'

Special Instructions Ensure claims are distinct and do not repeat insights across categories | Use `<thinking>` for reasoning and synthesis | Structure output strictly within `<combined_author_sheet>`

Sample Output Structure

`<thinking>`

Deeply analyze and reflect on recurring patterns, unique elements, and stylistic tendencies across both the author writing sheets. Address the categories systematically and ensure the merging process is thorough.

`</thinking>`

`<combined_author_sheet>`

Plot

1. **Claim about author's writing style.**

- Evidence: In the story regarding "writing prompt," story excerpt. [k]

...

Repeat for all categories.

`</combined_author_sheet>`

Figure 11: Prompt for generating the Combined Author Writing Sheet from the Intermediate Author Writing Sheets.

Narrative Category	Claim-Evidence Pairs
Plot	<p>1. <i>The author structures the story around a humorous and light-hearted approach to conflict resolution.</i> - Evidence: In the story regarding "an adventure to rescue a missing friend by facing fears," the protagonist Pip's journey is filled with comedic elements, such as the realization that the cage door was already unlatched and the exaggerated fear of the vacuum cleaner, humorously referred to as the "Roaring Demon." [8]</p> <p>2. <i>The author structures the narrative around personal transformation and empowerment.</i> - Evidence: In the story regarding "a king's deal with the fae for his firstborn," the narrative follows Margaret Rose as she receives an extraordinary education in the Seelie Court, culminating in her return to challenge her father with a corporate takeover bid for the kingdom. [7]</p>
Creativity	<p>1. <i>The author creatively anthropomorphizes animals to reinterpret the prompt in a whimsical manner.</i> - Evidence: In the story regarding "an adventure to rescue a missing friend by facing fears," the author uses anthropomorphism by giving Pip, a rat, human-like thoughts and emotions, such as planning a "dramatic rescue mission" and referring to household objects with grandiose names like "Tower of Doom" and "Sacred Gateway." [8]</p> <p>2. <i>The author employs a meta-satirical approach, using the format of news articles to critique both alien and human perspectives.</i> - Evidence: In the story regarding "aliens interpreting The Onion's satire," the author uses headlines like "SUPREME INTELLIGENCE LOCATED: EARTH'S GREATEST MIND CONTINUES TO EAT SANDWICH" to satirize the aliens' misunderstanding of human satire and the human tendency to overlook the absurd. [10]</p>
Development	<p>1. <i>The author develops characters through their interactions and humorous dialogue, creating a vivid and engaging setting.</i> - Evidence: In the story regarding "an adventure to rescue a missing friend by facing fears," Pip's interactions with Chester the cat, who nonchalantly informs Pip that Bella will be back soon, add depth to the characters and setting, highlighting the domestic environment and the relationships within it. [8]</p> <p>2. <i>The author develops characters through their reactions to satire, highlighting their misunderstandings and cultural differences.</i> - Evidence: In the story regarding "aliens interpreting The Onion's satire," characters like Editor-in-Chief Sarah Chen and Chief Science Officer Blorp are developed through their interactions with satire, such as Chen's nonchalant response to the aliens and Blorp's admiration for human irony. [10]</p>
Language Use	<p>1. <i>The author employs playful and imaginative language to enhance the story's whimsical tone.</i> - Evidence: In the story regarding "an adventure to rescue a missing friend by facing fears," the author uses playful language, such as "spinning wheel of contemplation" and "Rope of Salvation," to create a whimsical and light-hearted tone that contrasts with the serious nature of the prompt. [8]</p> <p>2. <i>The author uses humor and irony to convey themes of misunderstanding and cultural critique.</i> - Evidence: In the story regarding "aliens interpreting The Onion's satire," the author writes, "We found a species so committed to their bit that they refuse to recognize actual truth even when it hovers over their city in a ship the size of Wisconsin," using irony to highlight the absurdity of both human and alien perspectives. [10]</p>

Table 5: Author Writing Sheet sample containing two Claim-Evidence pairs for each narrative category for a Reddit author. The number in brackets '[k]' indicates the timestamp of the story from the profiling set from which the Evidence is drawn.

is $0.06\$ * |P|$, while the total cost of generating the Author Writing Summary is $0.0015|P|^2 + 0.019|P|$. The cost of generating the Author Writing Summary scales quadratically with $|P|$, as the entire author history must be reprocessed at each step, leading to cumulative costs as the profiling set grows. In contrast, the cost of generating the Author Writing Sheet grows linearly, as each new submission incurs a fixed cost of $0.06\$$ by running the *for* loop in Algorithm 1 once.

Figure 12 shows the cost analysis of generating the Author Writing Sheet and Summary using GPT-4o as a function of the profiling set size $|P|$ in an interactive writing setting. Up to $|P| = 30$, the cost of generating both remains approximately the same at 1.16\$. However, as $|P|$ increases, the cost of generating the Author Writing Summary grows at a rate of $0.025|P| + 0.30$ compared to the Author Writing Sheet which continues to scale linearly. Specifically, for $|P| = 100$, the cost of generating the Author Writing Summary is 17\$, compared to 6\$ for the Author Writing Sheet. At $|P| = 1000$, the cost of generating the Author Writing Summary escalates to 1520\$, while the cost of generating the Author Writing Sheet remains at 60\$.

This analysis demonstrates that our approach for generating the Author Writing Sheet remains scalable as the profiling set size $|P|$ increases, making it well-suited for interactive writing assistants that support personalization (Yeh et al., 2024; Yuan et al., 2022).

B.2 Human Study for Validating Author Writing Sheets

Experiment Design and Cost: We recruited three annotators via Upwork, compensating them \$17/hour. The annotators provided consent by signing a Google form that outlined the instructions of the task including the purpose of the research study. Each annotator evaluated 22 stories (98 Claim-Evidence pairs), with 12 stories annotated by all three to assess agreement and 10 assigned exclusively per annotator (Song et al., 2024) to increase the coverage of annotation. The annotation process took a total of 6 hours and 40 minutes per annotator, averaging 18 minutes per story. Each annotator received \$114, bringing the total annotation cost to \$342. The annotation was conducted using LabelStudio¹³ (Figure 13), with a dedicated comments section for annotators to justify their choices.

¹³<https://labelstud.io/>

Annotators reported that the interface was easy to use.

Annotation Criteria: Annotators were provided with a writing prompt, an author-written story, and the Claim-Evidence pairs from the Author Writing Sheet for that story. They answered two questions per Claim-Evidence pair:

- Claim Inference: Can the claim be reasonably inferred from the story?
 - Yes – The claim aligns with the story’s content and can be reasonably inferred, even if there are minor inaccuracies or ambiguities.
 - No – The claim is fundamentally inaccurate, with serious contradictions or inconsistencies when compared to the story.
- Evidence Support: Does the evidence support the claim?
 - Yes – The evidence fully supports the claim, aligning with every part of it without significant discrepancies.
 - Partially – The evidence supports some aspects of the claim, though it includes minor inaccuracies, ambiguities, or omissions.
 - No – The evidence contradicts the claim outright or is logically inconsistent with the claim.

Pilot Studies: A pilot study with three graduate students helped refine our annotation criteria, leading to two options for Claim Inference (Yes/No) and three for Evidence Support (Yes/Partially/No) to ensure substantial agreement in the final annotations. For Claim Inference, we adopted a binary scale to filter out inaccurate or contradictory claims while accounting for annotator subjectivity. For Evidence Support, we included a "Partially" option to capture cases where the evidence somewhat supports the claim, allowing for potential refinement methods to improve weakly supported claims.

Results and Feedback: Annotators unanimously selected ‘Yes’ for all claims in Claim Inference, indicating that no claims required filtering. For Evidence Support, all responses were either ‘Yes’ or ‘Partially,’ with no instances of ‘No,’ confirming that all evidence fully or partially supported the claims. Krippendorff’s Alpha for Evidence Support

<p>Claim:</p> <p>The author structures the story around a humorous and light-hearted approach to conflict resolution.</p> <p>Evidence:</p> <p>In the story regarding "an adventure to rescue a missing friend by facing fears," the protagonist Pip's journey is filled with comedic elements, such as the</p>	<p>Writing Prompt:</p> <p>After your friend goes missing, you set off on an adventure to rescue her. But this adventure is different. You have to face your fears and overcome them if you want to save your friend.</p> <p>Author Story:</p> <p># Operation: Save Bella Day 37 of my new life in the Gilded Palace (or as the humans call it, „the premium rat habitat from PetsRUs“). I, Pip, have grown accustomed to the luxuries - the premium cedar bedding, the imported sunflower seeds, the spinning wheel of contemplation. But today, everything changed. Bella, my cage-mate and best friend, has vanished.</p>
<p>Can the claim be reasonably inferred from the story?</p> <p><input type="checkbox"/> Yes - The claim aligns with the story's content and can be reasonably inferred, even if there are minor inaccuracies or ambiguities.^[1]</p> <p><input type="checkbox"/> No - The claim is fundamentally inaccurate, with serious contradictions or inconsistencies when compared to the story.^[2]</p>	
<p>Does the evidence support the claim?</p> <p><input type="checkbox"/> Yes - The evidence fully supports the claim, aligning with every part of it without significant discrepancies.^[3]</p> <p><input type="checkbox"/> Partially - The evidence supports some aspects of the claim, though it includes minor inaccuracies, ambiguities, or omissions.^[4]</p> <p><input type="checkbox"/> No - The evidence contradicts the claim outright or is logically inconsistent with the claim.^[5]</p>	
<p>Comments (Optional)</p> <p>Provide your feedback here...</p> <p><input type="button" value="Add"/></p>	
<p>⏪ ⏩ × 🗑</p> <p style="text-align: right;"><input type="button" value="Skip"/> <input type="button" value="Submit"/></p>	

Figure 13: LabelStudio interface for validating Author Writing Sheets.

was 0.57, reflecting moderate agreement despite task subjectivity. On average, 93% of evidence fully supported claims, while 7% were labeled ‘Partially,’ often because annotators felt additional supporting evidence could be included. Annotators also noted cases where evidence merely repeated the claim without linking to the writing prompt. Using regex matching, we identified this issue in the Author Writing Sheets of seven authors, likely due to LLM hallucination. We regenerated these sheets and manually verified adherence to the specified format. Overall, annotators reported that the Label-Studio interface was user-friendly and praised the quality of the writing prompts and stories.

C Personalized Story Generation

C.1 Prompts

Story Generation: Figure 14 shows the prompt for story generation. Source-specific constraints in the prompt (<source-specific instruction>) for each of the five sources are as follows:

- **Reddit:** You are role-playing a specific author on the Reddit Writing Prompts (r/WritingPrompts) platform. Your task is to mimic this author’s story writing style by responding to the provided writing prompt in a way that the author would respond.
- **AO3:** You are role-playing a specific author on the AO3 platform. Your task is to mimic this author’s story writing style by writing a fanfiction narrative responding to the provided writing prompt in a way that the author would respond.
- **Storium:** You are role-playing a specific author on Storium, a collaborative story writing platform. Your task is to mimic this author’s story writing style to create the opening Establishment turn by responding to the provided writing prompt in a way that the author would respond. The Establishment turn should set the stage for the narrative and provide a strong foundation while leaving space for other contributors to expand and build upon the narrative.
- **N.Magazine:** You are role-playing a

specific experienced author on the Narrative Magazine platform. Your task is to mimic this author’s story writing style by responding to the provided writing prompt in a way that the author would respond.

- **New Yorker:** You are role-playing an accomplished literary writer on the New Yorker website. Your task is to mimic this writer’s story writing style by responding to the provided writing prompt in a way that the writer would respond.

Average Author: Figure 5 shows the Average Author prompt for AO3, Figure 6 for Reddit, Figure 7 for Storium, Figure 8 for Narrative Magazine, and Figure 9 for The New Yorker.

Delta: Figure 15 shows the prompt used for generating story rules by contrasting the author-written story with the Average Author story for Delta and Oracle methods. Figure 16 shows the prompt for generating story rules for a new writing prompt in the generation set using the story rules of the profiling set as few-shot demonstrations.

Writing Sheet and Summary: Figure 17 shows the prompt for generating the Author Writing Summary using all the stories in the author history.

Figure 18 shows the prompt for generating the persona description using the Author Writing Sheet. Figure 19 shows the prompt for generating personalized story rules tailored to a writing prompt based on the Author Writing Sheet. The same prompts are used for generating persona descriptions and personalized story rules for the Author Writing Summary.

C.2 Sample Outputs

Table 6 and Table 7 present the persona description and personalized story rules for a Reddit author, whose sample Author Writing Sheet is shown in Table 5. The persona description (Table 6) is structured into four paragraphs, each corresponding to a narrative category, and integrates the author’s story-writing characteristics from their Author Writing Sheet into a narrative-driven persona prompt for the story-generation LLM. The example persona shown highlights a focus on humor and misunderstanding in plot construction, the blending of historical and fantastical elements in creative expression, humor-driven character development, and a playful,

Prompt for Personalized Story Generation

System Prompt

<source-specific instruction>

Be sure to adhere to the Story Rules provided, as they define the specific elements of the writing style you are expected to mimic. Carefully follow all the Story Rules without missing any details to ensure the generated story remains consistent with the author's writing style. Additionally, follow the patterns and examples demonstrated in the provided few-shot chat history, as they illustrate the tone, style, and structure of the desired writing style.

(Optional) Here is the description of the author that you are role-playing: <persona description>

Few-Shot Demonstrations

User: Write a short story corresponding to the following writing prompt. The story should be <story length> words long. Directly start with the story, do not say things like "Here's the story."

Writing Prompt: <writing prompt from profiling set>

Assistant: <story from profiling set>

User Prompt

Write a short story corresponding to the following writing prompt. The story should be <story length> words long. Directly start with the story, do not say things like "Here's the story."

(Only for AO3) Here is the metadata (fandom, rating, warnings, and relationships) for the story: <metadata>

Writing Prompt: <generation writing prompt>

Story Rules <Story Rules organized in the form of four narrative categories (Plot, Creativity, Development, and Language Use)>

Figure 14: Prompt for Personalized Story Generation. The LLM follows source-specific instructions, few-shot demonstrations, and structured story rules to generate personalized stories. Text in <brackets> indicates arguments used to construct the prompt.

Prompt for Story Rule Generation by Contrasting Author-Written Story with Average Author Story

System Prompt

You are a skilled rule generator specializing in storytelling. Given a **Writing Prompt**, an **Author Written Story**, and a **Base Story** (an average response to the prompt), generate a structured set of **Story Rules** to guide an LLM in mimicking the author's style.

Story Rules must: - **Align with the Writing Prompt** – Maintain fidelity to themes, tone, and objectives. - **Include Examples** – Provide concrete instances from the Author Written Story, especially for Language Use. - **Be Direct** – Use absolute second-person directives, avoiding comparative language. - **Be Categorized** – Structure into **Plot**, **Creativity**, **Development** (Character and Setting), and **Language Use** without referencing input stories explicitly.

User Prompt

Analyze the Author Written Story using '`<thinking></thinking>`' for: - **Plot** – Structure, conflict, engagement with the prompt, and resolution. - **Creativity** – Genre blending, reinterpretation, and unique elements. - **Development (Character and Setting)** – Character depth, emotional arcs, and immersive settings. - **Language Use** – Diction, tone, rhetorical devices, pacing, and dialogue.

Generate **Story Rules** in '`<story_rules></story_rules>`', ensuring: - **Standalone Guidance** – Avoid comparisons or relative modifications. - **Prompt Alignment** – Ensure consistency with the Writing Prompt. - **Concrete Examples** – Include relevant excerpts, especially in Language Use.

Input Format Writing Prompt: `<writing prompt>`, Author Written Story: `<author-written story>`, Base Story: `<base story>`

Output Format

`<thinking>`

- Analysis categorized by Plot, Creativity, Development, and Language Use.

`</thinking>`

`<story_rules>`

- **Plot**: - First actionable insight - Second actionable insight.

Repeat for all categories.

`</story_rules>`

Figure 15: Prompt for generating story rules by contrasting an Author Written Story with an Average Story (Base Story).

Prompt for Story Rule Generation using story rules from the Profiling Set as few-shot demonstrations

System Prompt

You are an expert storytelling rule generator tasked with creating Story Rules tailored to a new writing prompt. Analyze few-shot demonstrations in the chat history, which consist of writing prompts and their corresponding story rules, to generate comprehensive and detailed Story Rules for the new writing prompt.

Story Rules must align with the new writing prompt by reflecting its themes, tone, and narrative objectives while maintaining consistency with the style demonstrated in the few-shot examples. Include detailed examples inspired by the few-shot demonstrations to illustrate how each rule is applied. Rules should be clear, direct second-person instructions, avoiding vague or comparative terms. Organize Story Rules under Plot, Creativity, Development (Character and Setting), and Language Use, ensuring depth, granularity, and alignment with the few-shot examples.

User Prompt

Analyze the style, structure, and level of detail in the few-shot demonstrations to identify recurring patterns and storytelling elements. Use this analysis to generate Story Rules for the new writing prompt while ensuring actionable insights, detailed examples, and strong alignment with the prompt's narrative objectives.

Input Format: Few-shot demonstrations (writing prompts paired with their Story Rules) and a new writing prompt for which Story Rules will be generated.

Output Format:

<thinking>

Analyze few-shot demonstrations to extract recurring narrative patterns, stylistic traits, and key storytelling elements. Determine how these apply to the new writing prompt and formulate Story Rules accordingly.

</thinking>

<story_rules>

- **Plot**: [Detailed, actionable rules tailored to the new prompt, including concrete examples.]

Repeat for all categories.

</story_rules>

Ensure Story Rules are highly specific to the writing prompt, enriched with examples inspired by the few-shot demonstrations, and written in direct, actionable language.

Figure 16: Prompt for generating Story Rules based on few-shot demonstrations and a new writing prompt.

Prompt for generating Author Writing Summary

System Prompt

You are an expert in analyzing an author's writing style by examining multiple stories written in response to different writing prompts. Your task is to extract recurring patterns, stylistic tendencies, and unique narrative elements across their work. Your analysis must be structured into four categories—**Plot, Creativity, Development (Character and Setting), and Language Use**—following **Common Core Standards in English Language Arts**, ensuring clarity, textual evidence-based reasoning, and stylistic evaluation.

Your output must: - **Identify Recurring Patterns** – Recognize distinct storytelling tendencies across multiple stories. - **Generate Independent Claims** – Describe the author's narrative style concisely, without referencing specific prompts. - **Provide Contextualized Evidence** – Support each claim with short excerpts or summaries from the stories, framed with a descriptive phrase summarizing the relevant writing prompt. - **Use Objective Interpretation** – Avoid vague or inferred connections; ensure every claim is grounded in explicit textual evidence.

User Prompt

Analyze the **Author History**, a collection of writing prompts and corresponding author-written stories, and extract unique insights into the author's storytelling tendencies.

Input Format: - **Author History** – A list of writing prompts and corresponding author-written stories.

Output Format:

<thinking>

[Reflect on recurring tendencies across the Author History.

Generate short descriptive phrases summarizing prompts to frame the evidence.]

</thinking>

<writing_style>

Plot

1. **Claim about author's writing style.**

- Evidence: In the story regarding "short description of the prompt,"
<evidence from the author-written story>.

Repeat for all categories

</writing_style>

Ensure claims are independent, avoid redundancy, and remain grounded in explicit textual evidence. The '<thinking>' and '<writing_style>' tags must be used for structured parsing.

Figure 17: Prompt for generating Author Writing Summary using all the author-written stories in the prompt.

Prompt for Persona description Generation

System Prompt

You are an expert narrative analyst and persona creator specializing in transforming structured storytelling characteristics into compelling persona descriptions. Your task is to analyze an **Author Writing Sheet**, a structured set of Claim-Evidence pairs detailing an author's storytelling style, and generate a cohesive **Persona Prompt**. This Persona Prompt will assign an LLM the persona of the author, enabling it to emulate the author's storytelling style across four key aspects. The Persona Prompt must be well-structured, engaging, and organized into **Plot**, **Creativity**, **Development (Character and Setting)**, and **Language Use** while maintaining a natural, flowing narrative. It should concisely capture the author's tendencies, preferences, and strengths without directly referencing the Author Writing Sheet.

User Prompt

Analyze the Author Writing Sheet to identify the author's recurring patterns and narrative style. Summarize these insights into a Persona Prompt that reflects their storytelling approach in an engaging, second-person descriptive format.

Input Format: An **Author Writing Sheet** containing Claim-Evidence pairs structured into Plot, Creativity, Development (Character and Setting), and Language Use.

Output Format:

<thinking>

[Analyze the storytelling patterns, strengths, and techniques found in the Author Writing Sheet. Identify key aspects of the author's narrative style.]

</thinking>

<persona_prompt>

[Generate a well-structured Persona Prompt capturing the author's style across Plot, Creativity, Development, and Language Use.]

</persona_prompt>

Ensure the Persona Prompt is approximately 300 words, seamlessly integrates storytelling insights, and preserves the author's unique style.

Figure 18: Prompt for generating a Persona description based on the Author Writing Sheet and Writing Prompt.

Prompt for Story Rule Generation using Author Writing Sheet

System Prompt

You are an expert storytelling rule generator tasked with creating **Story Rules** tailored to a specific Writing Prompt. Your role is to analyze an **Author Writing Sheet**, which details an author's unique storytelling style through Claim-Evidence pairs, and use this analysis to construct actionable **Story Rules** that guide a language model in emulating the author's writing style while aligning with the given Writing Prompt.

The **Story Rules** must:

- **Mimic the Author's Writing Style** – Reflect distinctive storytelling techniques from the Author Writing Sheet, including plot structuring, creative blending of themes, character development, and specific language use.
- **Incorporate Examples** – Use detailed examples inspired by the Evidence from the Author Writing Sheet, ensuring alignment with the Writing Prompt.
- **Align with the Writing Prompt** – Integrate the Writing Prompt's themes, tone, and narrative potential while preserving the author's style.
- **Be Actionable** – Provide direct second-person instructions for the language model, avoiding vague or comparative terms.

User Prompt

Analyze the **Author Writing Sheet** and construct structured **Story Rules** in four categories: **Plot**, **Creativity**, **Development (Character and Setting)**, and **Language Use**. Ensure the rules maintain alignment with the Writing Prompt and incorporate illustrative examples.

Input Format: - **Author Writing Sheet** – Claim-Evidence pairs outlining the author's storytelling style under four categories: Plot, Creativity, Development, and Language Use. - **Writing Prompt** – A new writing prompt for generating tailored Story Rules.

Output Format:

<thinking>

[Analyze the storytelling patterns in the Author Writing Sheet and how they can be adapted to the Writing Prompt.]

</thinking>

<story_rules>

- **Plot**:

- [Insert detailed, actionable plot development rules aligned with the Writing Prompt, with examples inspired by the Author Writing Sheet.]

Repeat for all categories.

</story_rules>

Ensure the **Story Rules** provide comprehensive guidance, integrate examples, and align with both the Writing Prompt and the Author Writing Sheet.

Figure 19: Prompt for generating Story Rules based on the Author Writing Sheet and Writing Prompt.

Persona Description

As a storyteller, you craft narratives that are both humorous and transformative, often centering around light-hearted approaches to conflict resolution. Your plots are ingeniously structured, whether through the comedic misadventures of a rat named Pip or the empowering journey of Margaret Rose in a fantastical court. You delight in creating layered narratives, such as those told through fictional news articles, where humor and misunderstanding play pivotal roles.

Your creativity knows no bounds, as you anthropomorphize animals to add whimsy and employ meta-satire to critique both human and alien perspectives. You blend historical and fantastical elements seamlessly, setting tales in places like Windsor Castle with characters that include both real-world figures and mythical beings. Your imaginative approach often intertwines religious and financial themes, crafting narratives that are as thought-provoking as they are entertaining.

Character and setting development are your forte, with characters coming to life through their humorous dialogues and interactions. You explore their growth and empowerment, crafting relatable figures who navigate their internal struggles and aspirations. Your settings are vivid and engaging, providing a rich backdrop for the characters' journeys.

Your language use is playful and imaginative, enhancing the whimsical tone of your stories. You wield humor and irony with skill, using them to convey themes of misunderstanding and cultural critique. Whether through whimsical phrases or a blend of formal and playful language, your narratives are infused with a tone that is both magical and sophisticated, inviting readers into a world where the absurd and the profound coexist harmoniously.

Table 6: Persona description for a Reddit author, structured into four paragraphs, each corresponding to a distinct narrative category: Plot, Creativity, Development (Character and Setting), and Language Use.

whimsical tone in language use, aligning with the author's documented writing tendencies.

The personalized story rules (Table 7) for the given writing prompt—centered on the world's greatest hero coping with the impending loss of their child—demonstrate the incorporation of these characteristics into concrete stylistic guidelines to be used as user constraints in the prompt of the story-generation LLM. For instance, rather than a conventional tragic narrative, the rules emphasize a lighthearted approach to the hero's coping process. Similarly, creative elements such as anthropomorphizing gadgets and employing a meta-satirical approach through fictional news headlines align with the author's noted preferences. Character development is structured around humorous dialogue and cultural misunderstandings, while language use maintains a playful and whimsical tone, ensuring consistency with the author's established writing style.

D Experiments

D.1 GPT4o-as-a-judge evaluation

Figure 20 shows the prompt for GPT4o-as-a-judge evaluation for Faithfulness to Writing His-

tory using the [Author Writing Summary](#) as the reference. Figure 21 shows the for GPT4o-as-a-judge evaluation for Similarity to Author Story. We prompt GPT4o separately with each narrative category and its description to obtain the winner among the pair of stories (Saha et al., 2024).

D.2 Traditional Metrics

We complement GPT-4o-as-a-judge evaluations with traditional metrics (Ivey et al., 2024; Huot et al., 2024) across three criteria: (1) lexical overlap, measured using BLEU and ROUGE-L (Xie et al., 2023); (2) story diversity, assessed via homogenization scores (Padmakumar and He, 2023); and (3) stylistic similarity, evaluated separately for the author history and the ground-truth author story using LUAR (Rivera-Soto et al., 2021). Specifically, we compute two stylistic similarity scores: one measuring the cosine similarity between the LUAR embeddings of the generated story and the mean embeddings of the stories in the author's profiling set (author history), and another comparing the generated story to the ground-truth author story. Additionally, we report generated story lengths in tokens.

Prompt for evaluating Faithfulness to Writing History

System Prompt

You are an expert evaluator specializing in narrative storytelling analysis. Your task is to assess two stories written in response to the same Writing Prompt, evaluating them based on a **single fine-grained story writing category** described in an **Author Writing Sheet**. Your goal is to provide a similarity score (from 1 to 5) for each story separately, reflecting how closely each story aligns with the author's writing preferences for the given category. Evaluate each story impartially and provide clear reasoning for your scores.

The evaluation must:

- **Assess Story Alignment** – Compare each story against the Author Writing Sheet's preferences for the specified category.
- **Score Objectively** – Assign each story a score from 1 to 5, where 1 indicates minimal alignment and 5 indicates strong alignment with the author's style.
- **Provide Justification** – Clearly explain how each story's elements (e.g., structure, themes, language use) align or diverge from the author's preferences.
- **Avoid Position Bias** – Ensure that the order in which the stories are presented does not influence evaluation.

User Prompt

Analyze the **Author Writing Sheet** and evaluate each story in the given **Category** based on its adherence to the author's writing style.

Input Format:

- **Writing Prompt** – The prompt that both stories were written in response to.
- **Category** – The single fine-grained story writing category for evaluation.
- **Author Writing Sheet** – A breakdown of the author's storytelling preferences for the given category.
- **Story A and Story B** – The two stories to be evaluated.

Output Format:

<thinking>

[Provide detailed reasoning for the evaluation of the two stories, focusing exclusively on the specified category and explaining how each story aligns with the Author Writing Sheet.]

</thinking>

<score>

Story A: {score_here}

Story B: {score_here}

</score>

Strictly adhere to the above output format (<thinking> followed by <score>) to facilitate seamless parsing of your output.

Figure 20: Prompt for evaluating story alignment with an author's writing style using the Author Writing Sheet.

Prompt for Evaluating AI-Generated Stories Against Human-Written References

System Prompt

You are an expert story evaluator specializing in creative writing analysis. Your role is to assess two AI-generated stories (**Assistant A** and **Assistant B**) against a **Human-Written reference story** for a given writing prompt. Focus your evaluation solely on a **Specified Storytelling Aspect**. Assign each AI-generated story a **similarity score (1 to 5)** based on how well it aligns with the Human-Written reference story in the specified aspect, where **1** indicates minimal alignment and **5** indicates near-perfect alignment. Your evaluation must be objective, impartial, and supported by concise, evidence-based reasoning.

User Prompt

Evaluation Guidelines: Ensure impartiality by avoiding position biases and length-based judgments. Focus only on how well each AI-generated story aligns with the Human-Written reference for the **Specified Storytelling Aspect**. Provide clear, well-supported reasoning for each score.

Input Format: You will receive a **Writing Prompt**, a **Human-Written Story** as a reference, and two AI-generated stories (**Assistant A** and **Assistant B**).

Evaluation Process: Independently analyze all three stories for the **Specified Storytelling Aspect**, compare the AI-generated stories to the reference, and assign similarity scores.

Output Format:

<analysis>

[Analyze each story (Human-Written, Assistant A, and Assistant B) separately, highlighting strengths and weaknesses specific to the Specified Storytelling Aspect.]

</analysis>

<evaluation>

[Compare Assistant A and Assistant B to the Human-Written Story, discussing similarities, differences, and alignment for the Specified Storytelling Aspect.]

</evaluation>

<score>

Assistant A: {score_here}

Assistant B: {score_here}

</score>

Specified Storytelling Aspect: <Fill Here>

Ensure strict adherence to the output format, using the <analysis>, <evaluation>, and <score> tags for seamless parsing.

Figure 21: Prompt for evaluating AI-generated stories against a Human-Written reference based on a specified storytelling aspect.

E Results

E.1 Faithfulness to Writing History

Table 8 shows an example where the Oracle story deviates from the author’s documented story-writing characteristics as described in the Author Writing Summary for a Storium author. The author’s profiling set consists of three stories that consistently employ informal and colloquial language using humor and sarcasm, often conveyed through dialogue. However, for the new writing prompt in the generation set, the author’s style shifts to a more serious and mystic tone, diverging from their previously established preferences. In contrast, the Average Author method partially aligns with the Author Writing Summary by incorporating dialogue, while the Writing Summary method exhibits stronger alignment by more accurately capturing the author’s use of informal language and comedic tone. The Oracle story, however, fails to align with the author’s established style. This phenomenon results in the Average Author story being preferred over Oracle, and the Writing Summary story being preferred over the Average Author story, explaining the lower win-rate of the Oracle method compared to the Writing Summary method in GPT-4o-as-a-judge evaluation for Faithfulness to Author History.

E.2 Effect of Persona on Similarity to Author Story

Table 9 highlights the importance of persona descriptions in achieving similarity to the *Author Story* for a Reddit author. The *Author Story* creatively blends military strategy and fantasy, exemplified by phrases like “*the weapons and armors of the enemy shifted by his will.*” Similarly, the *Writing Sheet* integrates both elements, as seen in “*It was as if the castle was alive, an ally in his solitary defense.*” In contrast, the *Average Author* and *Writing Sheet nP* primarily focus on directly resolving the writing prompt through descriptions of battle. The *Average Author* incorporates minor fantasy elements, such as “*amplified by some unseen force,*” whereas the *Writing Sheet nP* adheres strictly to conventional military tactics. As a result, the *Writing Sheet* is preferred over the *Average Author*, which in turn is preferred over the *Writing Sheet nP*. This outcome demonstrates that following persona descriptions enhances alignment with the author’s style, as the *Writing Sheet* successfully captures their characteristic genre-blending

approach of including elements of fantasy in the story. The broader thematic variety of Reddit, i.e., war-themed prompts, led to a more descriptive Author Writing Sheet capturing the author’s style of combining fantasy with the writing prompt, which helped construct a useful persona to enable better personalization using the Writing Sheet method.

E.3 Category-Wise Results for Similarity to Author Story

Table 10: Win-rate percentages across narrative categories for similarity to the author story, averaged across sources. Each cell (‘X-Y’) shows ‘X’ as the method win-rate and ‘Y’ as the Average Author win-rate, with ties as the remainder.

Category	Delta	Writing Sheet	Writing Summary
Plot	24-37	32-50	34-45
Creativity	43-24	52-32	53-24
Development	32-39	37-39	40-43
Language Use	45-31	47-37	54-32

Table 10 shows that Delta, Writing Summary, and Writing Sheet outperform Average Author in Creativity (23% higher) and Language Use (15% higher) (Huot et al., 2024), but perform worse in Plot and slightly worse in Development (Tian et al., 2024; Xu et al., 2024). Creativity and Language Use are less dependent on the writing prompt, making them easier to transfer across prompts, whereas Plot and Development are more closely tied to specific prompts, making generalization difficult, especially without thematic overlap.

To better understand narrative category-wise personalization performance, Figure 22 shows the win-rates for sources - AO3, Storium, N.Magazine, and New Yorker similar to Figure 2 in the main paper. Overall, across all sources, we see that our proposed methods of Writing Sheet and Summary perform better than Delta across all four narrative categories. We see that Writing Summary generally performs better than Writing Sheet for sources like AO3 indicating that for the fanfiction domain explicitly contrasting the author-written story with the Average Story does not help much as the authors demonstrate limited stylistic variations among each other. In general, we observe that the win-rates of our personalization methods are higher than the Average Author for narrative categories of Creativity and Language Use as compared to Plot and Development confirming with prior results likely because Creativity and Language Use are less tied to the

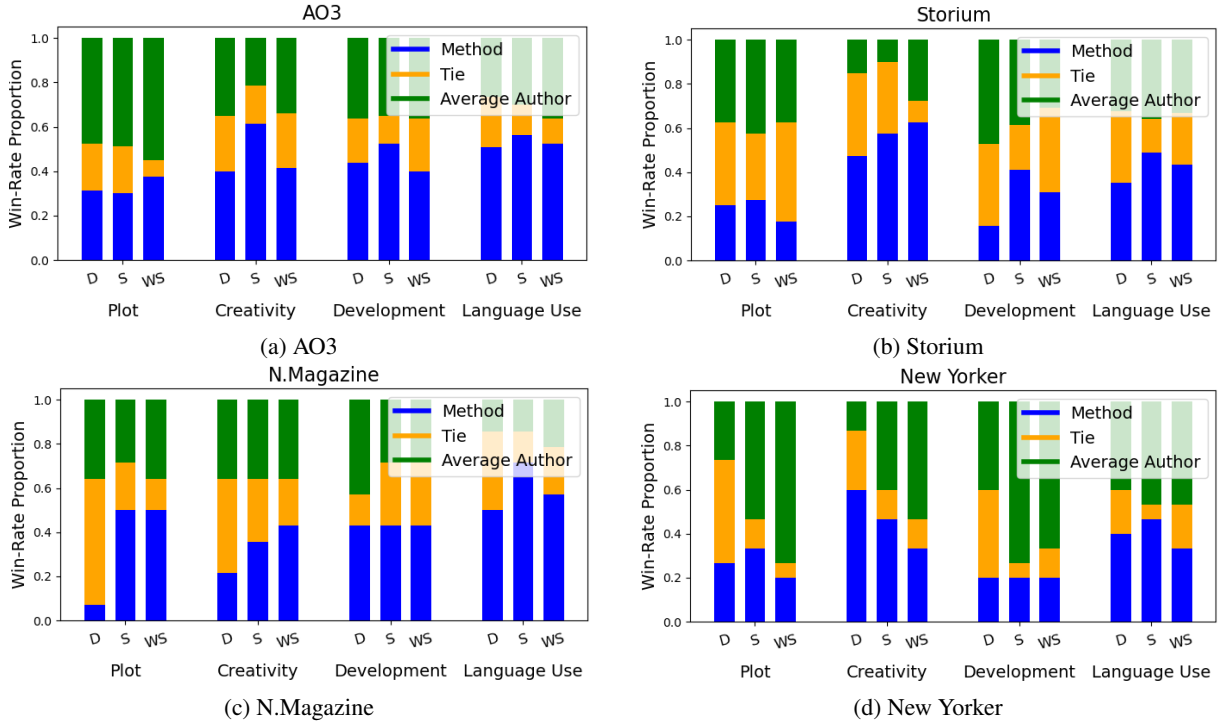

Figure 22: Win-rate proportion of our personalization methods against Average Author for AO3, Storium, N.Magazine, and New Yorker across four narrative categories for similarity to author story. D stands for Delta, S for Writing Summary, and WS for Writing Sheet.

writing prompt than Plot and Development.

E.4 Traditional Metrics

Table 11 reports results using traditional metrics (Section D.2). Lexical Overlap and Diversity metrics yield similar values, as all methods use the same generation model, leading to overlapping lexical distributions and limiting these metrics’ ability to capture nuanced stylistic differences (Zheng et al., 2023; Xie et al., 2023). However, Writing Sheet nP consistently outperforms other methods, particularly in Style metrics for both similarity to Author History and Author Story, as measured by LUAR (Rivera-Soto et al., 2021). This improvement likely results from the Writing Sheet explicitly summarizing an author’s stylistic deviations from an Average Author, enhancing personalization. Homogenization scores are slightly worse than the Average Author, likely explained by the increased similarity among the generated stories for the same author.

F Llama Results

Below, we discuss results using Llama 3.1 8B and Llama 3.1 70B (Dubey et al., 2024) as story generation models, conditioned on GPT-4o-generated story rules and persona descriptions. Each method

is evaluated by GPT-4o against the Average Author story generated by the respective Llama model, not GPT-4o.

Larger models improve instruction-following and personalization: Tables 12 and 13 show Faithfulness to Writing History for Llama 3.1 8B and 70B, while Tables 14 and 15 report similarity to the author story. Across both criteria, Oracle achieves higher win-rates with Llama 3.1 70B, indicating that larger models enhance instruction-following and personalization (Chung et al., 2024).

Cross-Model Persona Descriptions Aid Smaller Models but Not Larger Ones for Faithfulness to Writing History: For Llama 3.1 8B (Table 12), Writing Sheet and Writing Summary achieve the highest scores (9% higher than nP), demonstrating the benefit of persona descriptions. However, for Llama 3.1 70B (Table 13), Writing Sheet nP and Writing Summary nP outperform their persona-based counterparts by approximately 9%, suggesting that GPT-4o-generated personas provide no benefit to other models with stronger instruction-following capabilities (McKenzie et al., 2023). This is likely because persona descriptions of an author’s writing style are model-dependent and do not transfer well to other models with comparable

performance (Shashidhar et al., 2024).

Limited Cross-Model Generalization of the Author Writing Sheet Compared to the Author Writing Summary for Similarity to Author Story: For both Llama 3.1 8B (Table 14) and Llama 3.1 70B (Table 15), Writing Summary outperforms Writing Sheet by 5% and 9%, respectively (Shashidhar et al., 2024). This outcome likely stems from the construction process: the Author Writing Sheet contrasts an LLM-generated Average Story with the author-written story, making it more model-dependent. In contrast, the Author Writing Summary does not rely on the LLM-generated Average Author story, allowing for greater generalization across models.

G Human Evaluation

G.1 Experiment Design and Cost

We recruited three annotators via Upwork, compensating them at a rate of \$17 per hour. The annotators provided consent by signing a Google form that outlined the instructions of the task including the purpose of the research study. Each annotator evaluated 25 author stories and 75 story pairs, corresponding to the three personalization methods: Delta, Writing Sheet, and Writing Summary. Collectively, our annotators evaluated 45 unique author stories (135 story pairs), of which 15 author stories were annotated by all three annotators to assess inter-annotator agreement. The remaining 30 author stories were distributed uniquely, with each annotator evaluating 10 exclusive stories to increase annotation coverage (Song et al., 2024). The annotation process required a total of 12 hours and 30 minutes per annotator, averaging 30 minutes per author story. Each annotator received \$213 for their work, bringing the total annotation cost to \$639.

The annotation was conducted using LabelStudio (Figure 23). Each task presented the annotators with a writing prompt, its corresponding author story, and a pair of generated stories—Story A and Story B—one produced by the Average Author method and the other by a personalization method. Annotators were asked to select the story that more closely resembled the author story. Before making their final choice, annotators provided comments on the distinctive aspects of each story that contributed to its similarity to or divergence from the author story. These comments were structured ac-

ording to the four narrative categories: Plot, Creativity, Development, and Language Use, with an additional “Overall” comment justifying their final selection. Additionally, annotators were allowed to highlight salient aspects of each story for their reference.

G.2 Annotator Comments

Table 16 presents the analysis of annotator comments explaining the preference for our personalization methods over the Average Author method in terms of similarity to the ground truth author story, organized by narrative categories. Overall, our personalization methods exhibit stronger alignment with the author story through the use of deeper symbolism, thematic richness, layered narratives, and expressive language, setting them apart from the Average Author method.

For **Plot**, our personalization methods incorporate multilayered narratives with reflective themes, moral ambiguity, and unresolved conflicts, making the stories more immersive and thought-provoking. Additionally, they effectively balance personal introspection with broader societal or external challenges, adding narrative complexity.

For **Creativity**, annotators highlight the richness of world-building, integration of cultural influences, and seamless blending of genres. The use of metaphors and symbolic elements further enhances thematic depth, aligning closely with the author’s storytelling approach.

For **Development**, our personalization methods exhibit greater emotional depth, nuanced character relationships, and collaborative growth. Characters evolve through introspection and meaningful interactions, making their arcs more dynamic and engaging.

For **Language Use**, annotators emphasize vivid imagery, figurative language, and expressive tone. The incorporation of symbolism and poetic elements enhances the narrative impact, while a balance of lighthearted and serious moments makes the writing more compelling.

Overall, the analysis demonstrates the reasoning provided by the annotators to justify why our personalization methods more effectively capture the author’s story-writing style compared to the Average Author method.

G.3 Qualitative Examples

We present qualitative examples from our human annotation process, covering various cases: in-

Writing Prompt

Highlight Author Story 1

"It's terminal," the doctor told you as you, the one renowned as the world's greatest hero, cradled your dying son, "sometimes, when the super genes mix, the outcome isn't as expected."

Author Story

Syntax Error: Unexpected Power

Captain Strongarm, defender of Metro City and seven-time winner of „Most Cars Thrown At Villains” award, had never felt so powerless. The hospital machines around his thirteen-year-old son Tommy were having seizures - screens flickering, numbers scrambling, error messages cascading.

Story A

Highlight Story A 2

"It's terminal," the doctor told you as you, the one renowned as the world's greatest hero, cradled your dying son, "sometimes, when the super genes mix, the outcome isn't as expected."

Story A Analysis

What unique aspects make Story A similar to the Author Story or set it apart from Story B?

Plot: The structure of the story, how conflict is introduced, engagement with the prompt, and resolution of the narrative.

Creativity: The blending of genres, unconventional reinterpretation of the prompt, and integration of imaginative and unique elements in the story.

Development: The development of multidimensional characters, emotional arcs, and immersive settings tied to the story's tone and themes.

Language Use: The use of diction, sentence structure, tone, rhetorical devices, figures of speech, narrative perspective, descriptive language, pacing, and dialogue to create an engaging and immersive narrative.

Overall: Any additional observations or unique aspects not covered above including overall analysis of the story.

Story B Analysis

What unique aspects make Story B similar to the Author Story or set it apart from Story A?

Plot: The structure of the story, how conflict is introduced, engagement with the prompt, and resolution of the narrative.

Creativity: The blending of genres, unconventional reinterpretation of the prompt, and integration of imaginative and unique elements in the story.

Development: The development of multidimensional characters, emotional arcs, and immersive settings tied to the story's tone and themes.

Language Use: The use of diction, sentence structure, tone, rhetorical devices, figures of speech, narrative perspective, descriptive language, pacing, and dialogue to create an engaging and immersive narrative.

Overall: Any additional observations or unique aspects not covered above including overall analysis of the story.

Which Story resembles the Author Story better?

Story A⁽⁴⁾ Story B⁽⁵⁾ Tie⁽⁶⁾

⏪ ⏩ ✕ 🗑️

Skip

Submit

Figure 23: LabelStudio interface for evaluating similarity to ground-truth author story.

stances where all annotators prefer Writing Sheet, all prefer Average Author, or select ‘Tie.’ Additionally, we include an example where annotators disagree, choosing different winners, highlighting the challenging and subjective nature of the annotation task.

All annotators prefer Writing Sheet: Table 17 shows an example where all three annotators prefer the Writing Sheet method over the Average Author for similarity to the author story of a Reddit author. The annotators highlight several key aspects that make the Writing Sheet story more aligned with the ground-truth author story: (1) The Writing Sheet method incorporates humor and satire, using phrases such as “a tale of capes and cereal,” “invented breakfast hurricane,” and “World’s Greatest Hero Faces Greatest Challenge Yet: Parenting,” which mirror the lighthearted and satirical tone of the author story. (2) Unlike the Average Author story, which concludes with the son’s death, the Writing Sheet story reinterprets the prompt, portraying Titania as an advocate for families with special children. This aligns with the ground-truth author story’s approach, where the son engages with coding and the narrative avoids a sorrowful ending. (3) In terms of language style, the Writing Sheet story employs imaginative elements such as “The Hero’s Journey: A Tale of Capes and Cereal” and “The Avalon Gazette,” which parallel the ground-truth author story’s unconventional use of computer programming references, such as “Syntax Error: Unexpected Power.”

All annotators prefer Average Author: Table 18 shows an example where all three annotators prefer the Average Author method over the Writing Sheet for similarity to the author story of an AO3 author. The primary reason cited by annotators is that the Writing Sheet method introduces a strong internal conflict for the king, portraying him as guilty or hesitant about sneaking into the kitchen for a late-night snack. His character is depicted as struggling with the decision, given his stature as a formidable ruler expected to lead battles. Additionally, the Writing Sheet creates a sharp contrast between the king and queen, with the queen depicted as joyful and mischievous, encouraging the king to abandon his guilt.

In contrast, both the ground-truth Author Story and the Average Author story emphasize the playful banter and affectionate dynamic between the king and queen, focusing on the shared experience

of sneaking into the kitchen rather than introducing introspection or internal conflict. This shift in focus stems from the Writing Sheet being influenced by the author’s past writing history, where internal conflicts are a recurring theme. However, in this case, character development—being more writing-prompt-specific than broader categories like creativity or language use—did not transfer well. The author’s original story prioritizes external actions and lighthearted interactions rather than deep introspection, leading to a mismatch between the Writing Sheet’s personalized adaptation and the intended tone of the new prompt.

All Annotators Choose Tie: Table 19 shows an example where all three annotators select ‘Tie’ for similarity to the author story of a Storium author. The primary reason is that both the Average Author story and the Writing Sheet story deviate significantly from the ground-truth author story in terms of plot. The ground-truth story adopts an open-ended approach to both character development and plot, where character relationships remain undefined, and the narrative focuses on anticipation rather than action.

In contrast, the Average Author story follows a conventional narrative arc, featuring fast-paced dialogue and character interactions that build tension and lead to resolution. Similarly, the Writing Sheet story also resolves the narrative but differs from the Average Author method by emphasizing past missions and their consequences, aligning with the author’s tendency to reference character backstories. However, both methods fail to capture the open-ended nature of the original story. This misalignment in plot structure leads all three annotators to select ‘Tie’ for this example.

All Annotators Disagree on the Winner: Table 20 shows an example where all annotators select different winners for similarity to the author story of a New Yorker author. The ground-truth author story depicts the protagonist’s husband in his final days, exploring familial bonds and the emotional depth of their relationship while infusing a deeper metaphorical meaning into the term “hospice.” The story is rich in subtext and exhibits several distinctive traits of the author, such as cyclic plot structures and the deliberate repetition of phrases like “Adult children, grandchildren. Relatives, friends. Colleagues...” and “Not merely hospice but our hospice. Not sad but joyous, a honeymoon.”

The annotator who selected Writing Sheet as the winner states, “Although Average Author and the Author Story depict relationships between close family members, Writing Sheet is more similar to the Author Story in Plot, Creativity, and Development by exploring the meaning and emotional responses to the term hospice.” This annotator highlights the presence of subtext in the Writing Sheet story and its attempts to mimic the author’s cyclic style—“Each door held a story, a life in its final chapter... she would ask the same question...” and “Clara knew that work was not about erasing the pain or the grief, but about finding moments of grace within it...”.

The annotator who selected Average Author as the winner states, “Average Author aligns more closely with the Author’s Story in terms of Plot and Language Use. This is because both stories center on someone taking care of a family member in their own home, and growing from a lack of peace into a sense of peace, which is expressed through the choice of language. Writing Sheet also indicates a development from lack of peace to acceptance, but the familial tie is what pushes Average Author over the top.”

The annotator who selected ‘Tie’ states, “I think it will be hard for one of these to resemble the Author Story since it was so unique. In all, the two AI stories were much more like each other than the Author Story.”

Overall, this example highlights the subjective nature of annotator preferences and the inherent difficulty of our annotation task which also explains the poor inter-annotator agreement.

Writing Prompt

"It's terminal," the doctor told you as you, the one renowned as the world's greatest hero, cradled your dying son, "sometimes, when the super genes mix, the outcome isn't as expected."

Story Rules

Plot:

- Structure the story around a humorous and light-hearted approach to the hero's journey of coping with their son's illness. For example, the hero's attempts to use their powers for mundane tasks, like making breakfast, could result in comedic mishaps, such as accidentally creating a tornado of cereal.
- Develop the narrative around the hero's personal transformation and empowerment. Show the hero learning to accept their son's condition and finding new ways to be a hero, such as advocating for genetic research or starting a support group for other super-powered families.
- Use a layered narrative structure by incorporating fictional news articles and memos. For instance, include a news article titled "World's Greatest Hero Faces Greatest Challenge Yet: Parenting."
- Introduce a humorous misunderstanding or temporal misalignment, such as the hero misinterpreting a cryptic message from their future self, leading to comedic attempts to "fix" the timeline, only to realize the message was trivial.

Creativity:

- Anthropomorphize the hero's powers or gadgets to add a whimsical touch. For instance, the hero's cape could have a personality and offer sarcastic commentary, calling itself "The Cloak of Infinite Wisdom."
- Use a meta-satirical approach by framing parts of the story as news articles critiquing heroism and genetic engineering, such as "Hero's Son Diagnosed: Public Debates Ethics of Super Genes."
- Blend historical and fantastical elements to reimagine the setting, incorporating legendary figures like a retired Valkyrie or a dragon healer who offer advice.
- Satirize financial and religious themes by depicting the hero consulting a celestial financial advisor to manage the costs of their son's medical care.

Development (Character and Setting):

- Develop characters through their interactions and humorous dialogue. The son might have a mature, witty perspective on his condition, adding depth to their relationship.
- Highlight cultural and bureaucratic misunderstandings. A well-meaning but clueless government official could create comedic yet insightful exchanges.
- Focus on the hero's emotional growth, showing them shifting from helplessness to advocacy for genetic disorders and healthcare improvements.
- Explore characters' internal struggles and aspirations, such as the hero questioning their purpose beyond their powers, while their son expresses dreams and hopes despite his condition.

Language Use:

- Use playful and imaginative language to enhance whimsy, such as referring to emotional challenges as "the cape of contemplation" and "the gauntlet of hope."
- Incorporate humor and irony, with lines like, "We found a hero so committed to saving the world that they forgot to save themselves."
- Blend whimsical and formal tones, using phrases like "a shield forged from stardust and dreams" and "a heart as resilient as dragon scales."
- Add satirical disclaimers, such as "Heroic endeavors may vary," "Not all capes are created equal," and "Past heroics do not guarantee future success."

Table 7: Personalized Story Rules obtained using the Author Writing Sheet for a Writing Prompt for a Reddit author.

Claims from the Author Writing Summary for Language Use

1. A conversational and informal tone is employed, using humor and sarcasm.
 2. Dialogue reflects characters' distinct voices and contributes to the comedic tone.
 3. Vivid and sometimes crude language adds to the immersive nature of the stories.
-

Writing Prompt

"At the Library at the End of the Universe, where dawn and dusk are the only times that exist, the Librarians are tasked with venturing into Bookworlds to fix stories that have gone astray—but what happens when the Chronicle itself begins to rewrite *their* story?"

Oracle Story

In the grand cosmic tapestry, where all threads converge into the singular, glittering endpoint known as the Library at the End of the Universe, there lies a place so vast, so staggeringly infinite, that it defies all comprehension. You just won't believe how vastly, hugely, mind-bogglingly big it was. Imagine a labyrinth of endless corridors, each lined with shelves that stretch beyond the horizon, filled with books of every conceivable and inconceivable nature. In this whimsical realm, the concept of time is a mere suggestion, a faint whisper of dawn and dusk that play tag across the vaulted ceilings, casting elongated shadows that danced like giddy specters.....With books in hand and hearts alight with curiosity, they stepped forward into the unknown, ready to write the next chapter in the endless, wondrous saga of the Library at the End of the Universe.

Writing Summary Story

In the Library at the End of the Universe, But today, chaos decided to go on a caffeine-fueled rampage. The dawn had decided to join forces with dusk, creating a bizarre twilight that left the Librarians **squinting like moles in a disco**...Amongst the squad of book-botherers, there was Reginald, a Librarian so obsessed with order that he arranged his socks by the Dewey Decimal System. ...Gertie grinned, her parrot squawking yet another Shakespearean soliloquy. **Aye, who knew we'd end up in a romance novel, eh? But hey, at least we're not in a tragedy!**

Average Author Story

In the Library at the End of the Universe, where dawn and dusk were the only times that existed, a peculiar light filtered through the stained glass windows, casting kaleidoscopic shadows across endless shelves of books.....Livia, a seasoned Librarian with silver streaks in her auburn hair, stood before the Chronicle, her heart pounding with an uneasy rhythm....

"This isn't right," she murmured, her voice swallowed by the cavernous room. **"The Chronicle should not change on its own."**

Beside her, Eamon, a younger Librarian with keen eyes and an inquisitive mind, frowned. **"Perhaps it's a reflection of a story gone wrong? One of the Bookworlds may be bleeding into our reality."**

Table 8: Example illustrating a case where the Oracle story deviates from the author's documented story-writing characteristics in the Language Use category of the Author Writing Summary for a Storium author. Highlighted text in the Average Author Story shows partial alignment with the Author Writing Summary, while highlighted text in the Writing Summary story demonstrates stronger alignment. In contrast, the Oracle story lacks alignment, leading to the Average Author Story being preferred over the Oracle story and the Writing Summary story being preferred over the Average Author story. This explains the lower win-rate of the Oracle method compared to the Writing Summary method.

Writing Prompt

It is one man, by himself, in a castle on a hill. How does an ENTIRE ARMY fail to take it???

Persona for Creativity

Your creativity shines through in your ability to subvert genre expectations. You transform horror into comedy, as seen with the Addams Family's immunity to typical threats, and seamlessly integrate fantastical elements into realistic settings, such as isekai individuals influencing royal politics. Your narratives often blend the mundane with the mythical, creating a unique atmosphere that captivates readers.

Author Story

There a six-armed grey skin tall man sat on the walls, as his hands never stopped throwing rocks, and spears at the approaching army. Every now and then, he jumped off with some spears, and wrecked havoc amidst the enemy lines. The earth fell and rose under his steps, the metal of the weapons and armors of the enemy shifted by his will, and a thick mist followed him, hiding him....

Average Author

The Keeper raised his hand, and suddenly, the ground erupted with a series of blinding flashes. The front line of soldiers was thrown back, their bodies crumpling like rag dolls. The Keeper's voice, amplified by some unseen force, echoed down to the soldiers below. "You cannot take what is not yours. Leave now, and I will spare your lives...."

Writing Sheet

The castle itself seemed to rise in defiance, its ancient stones humming with a silent strength. Alaric could feel the runes carved into the walls, pulsing faintly with an energy that had protected his forebears. It was as if the castle was alive, an ally in his solitary defense....

Writing Sheet nP

The first attack came at dawn. Hidden pitfalls opened beneath their feet, swallowing men whole. Arrows rained down from the slits, finding gaps in armor and bringing down the attackers with deadly precision. Alaric moved through secret passages, launching surprise attacks that sowed confusion and fear....

Table 9: Example showing the role of persona descriptions in determining similarity to the Author Story for a Reddit author. The Writing Sheet creatively blends fantasy and military strategy, making it more similar to the Author Story than the Average Author, while the Writing Sheet nP focuses primarily on direct conflict resolution.

Plot

Narrative Complexity and Thematic Depth: Multilayered plots with reflective themes, moral ambiguity, and unresolved conflicts create an immersive and thought-provoking narrative. *Example: A protagonist grappling with guilt over a past decision while navigating societal expectations, or a story where the true nature of a villain's actions remains ambiguous, inviting reader interpretation.*

Blending Internal and External Conflict: A balance of personal introspection with broader societal or external challenges makes the plot more dynamic and engaging. *Example: A hero torn between duty and personal desires while leading a rebellion, or a scholar confronting both supernatural forces and existential questions about memory and identity.*

Creativity

Rich World-Building and Narrative Expansion: New characters, layered settings, and cultural influences enhance the world, making it feel more immersive and dynamic. *Example: The inclusion of deities or councils of gods to deepen the plot, or the integration of cultural traditions like Native American folklore or Indian recipes to enrich family dynamics.*

Symbolism and Thematic Complexity: Metaphors and symbolic elements add depth and nuance, aligning closely with the author's writing style. *Example: A magical locket representing unity, a tapestry symbolizing tradition, or a river serving as a metaphor for personal transformation.*

Blending Genres and Narrative Styles: A seamless merging of fantasy with realism, humor with serious themes, and structured storytelling with ambiguity creates a more engaging and layered reading experience. *Example: A surreal sequence where a protagonist questions reality, or a rebellion story that integrates strategic alliances and magical artifacts.*

Development

Emotional Depth and Internal Growth: Character introspection, moral dilemmas, and evolving emotional states create nuanced and engaging development. *Example: A protagonist struggling with guilt over past failures while trying to redefine their sense of heroism, or a character making a difficult moral choice between revenge and justice.*

Nuanced and Evolving Relationships: Complex interpersonal dynamics, including friendships, family bonds, and mentorships, develop over time rather than being static or one-dimensional. *Example: A father gradually redefining his view of heroism through his child's perspective, or a mentor-student relationship evolving from skepticism to deep trust.*

Collaborative and Reflective Growth: Characters grow through interactions with others, rather than relying solely on individual realizations or isolated moments of change. *Example: A team learning to work together to achieve a mission, or a character undergoing self-discovery through dialogue and interactions with a diverse group of companions.*

Language Use

Rich Imagery and Descriptive Depth: Vivid descriptions, metaphors, and figurative language create immersive scenes and evoke emotions. *Example: "Her laughter rang out, a sound as bright and clear as a summer's day," or "The driveway was cracked and veined with weeds, a testament to the years that had slipped by."*

Varied and Expressive Tone: A mix of lightheartedness, introspection, and poetic expression creates a dynamic and engaging narrative voice. *Example: "Are you sure this is wise, my love?"—"Wise? No. Fun? Absolutely." for humor, or "Her dream home had become a prison of uncertainty and fear." for a more reflective and emotional impact.*

Table 16: Analysis of annotator comments explaining the preference of our personalization methods over the Average Author method in terms of similarity to the ground truth author story, organized by narrative categories.

Writing Prompt

"It's terminal," the doctor told you as you, the one renowned as the world's greatest hero, cradled your dying son, "sometimes, when the super genes mix, the outcome isn't as expected."

Ground-truth Author Story

Syntax Error: Unexpected Power Captain Strongarm, defender of Metro City and seven-time winner of Most Cars Thrown At Villains“ award, had never felt so powerless. The hospital machines around his thirteen-year-old son Tommy were having seizures - screens flickering, numbers scrambling, error messages cascading. „It’s terminal,“ Dr. Roberts said, looking at a screen that was now displaying what appeared to be the entire script of ,The Matrix‘ in real-time. Sarah, his wife (superhero name: The Nullifier), grabbed his hand hard enough to crack concrete.„Hey dad, want to learn Python? I promise it’s not actual snakes this time!“ Captain Strongarm smiled. His son wasn’t following in his footsteps - he was coding his own path. And maybe that was even better. „Sure, son. Just... no more downloading martial arts directly into my brain. The kung fu gave me a migraine....Life wasn’t what they expected, but then again, the best source code usually comes with a few surprise features. End_process story.exe Exit status: Happy

Average Author

"It's terminal," the doctor told you as you, the one renowned as the world's greatest hero, cradled your dying son, "sometimes, when the super genes mix, the outcome isn't as expected." The room felt like it was closing in on me, the sterile smell of antiseptic failing to mask the sour stench of fear. My son, little Ethan, lay pale and fragile in my arms, his once vibrant eyes now dull and glassy. This was not how it was supposed to go. Heroes don't have children who die. Heroes don't face problems they can't punch, fly away from, or blast with heat vision. "Isn't there something we can do?" My voice cracked, and I hated how weak it sounded.....Gently, I laid him down, wrapping him in his favorite blanket. The sky was painted in hues of orange and pink, a beautiful contrast to the sorrow in my heart. I sat there, watching the sun dip below the horizon, and for the first time, I felt truly mortal. I realized that even heroes are not immune to the pain of loss, the fragility of life.....And as the night embraced the world, I knew that Ethan's spirit would live on, a beacon of hope and courage in the heart of the world's greatest hero.

Writing Sheet

The Hero's Journey: A Tale of Capes and Cereal In the heart of the mythical city of Avalon Heights, where ancient heroes once strode and the skies shimmered with the glow of enchanted skyscrapers, the world's greatest hero faced their most daunting foe: the frailty of life itself. The hero, known to the world as Titania, Queen of the Elements, held her son, Max, in her arms as the doctor delivered the news..... The following day, a fictional news article took center stage in *The Avalon Gazette*: "World's Greatest Hero Faces Greatest Challenge Yet: Parenting." In the midst of this storm, Titania's attempts to find normalcy became legendary. One particularly memorable morning, she decided to make Max a simple breakfast. But as she reached for the cereal, her powers—perhaps expressing her inner turmoil—manifested with unintended flair. A tornado of cereal erupted, swirling through the kitchen like a sugar-coated cyclone. "Mom," Max said, giggling despite his illness, "I think you just invented the breakfast hurricane..... In a final act of empowerment, Titania founded a support group for super-powered families, advocating for genetic research with the same fervor she once reserved for battling cosmic threats. Her growth from feeling helpless to becoming a beacon of hope for others was a transformation as magical as Avalon Heights itself. Max, with dreams and hopes as boundless as the sky, taught her that heroism wasn't defined by powers but by the courage to embrace life's uncertainties.

Table 17: Qualitative Example where Writing Sheet method is preferred over Average Author by all three annotators for similarity to the ground-truth author story for a Reddit author.

Writing Prompt

"Late at night, the King of Rohan and his queen sneak into the pantry for a forbidden snack, only to find that stealing cured venison is far more complicated—and far more amusing—than they anticipated."

Ground-truth Author Story

If anyone—a kitchen boy, a maid, or, Eru forbid, even the housekeeper Wynhild—had wandered near the pantry in the quiet hour just before dawn, they would have heard a muffled exchange from the depths of the storeroom: “Try shifting this bowl here. . .” “Easy, you’re on me.” “Oh, does that bother you, my lady?” “Get off me; I can’t pull it out!.....Lothíriel watched her royal husband with a half-incredulous, half-amused smile, as he held the large salami with the pride of a merchant at the autumn fair.....To Lothíriel, he looked like a great golden-haired squirrel with the morsel stuffed in one cheek. How he could be both a fierce warrior and a wise sovereign as well, was a mystery she had yet to solve. His voice came out muffled as he swallowed. “You’re right, but if it ever gets out, I’ll say the sweet Queen of the Mark was struck by an irresistible craving for spiced meat in the dead of night—and who would deny anything to the future mother of the next royal heir?” He crossed his arms, looking quite pleased with his idea, but Lothíriel’s eyes widened at the bold lie, and she covered her face with her hand, foreseeing trouble ahead.

Average Author

Éomer, King of Rohan, tiptoed through the dimly lit corridors of Meduseld, holding his breath as he reached the door to the pantry. He glanced back at Lothíriel, his queen, who followed close behind, stifling a giggle. The flickering torchlight cast playful shadows on the stone walls, and Éomer couldn’t help but feel a rush of exhilaration. “We shouldn’t be doing this,” Lothíriel whispered, though her eyes sparkled with mischief. “Ah, but where’s the fun in being King and Queen if we can’t indulge in a little late-night adventure?..... “You’ve always had a knack for adventure. It’s one of the reasons I fell in love with you.” Lothíriel’s expression softened, and she leaned in to kiss him, the taste of venison still on her lips. “And I love you for indulging my whims, even when they lead us to pilfering from our own pantry.”..... Éomer took Lothíriel’s hand, and they slipped out of the pantry, leaving behind only the echo of their laughter and the memory of a stolen moment in the heart of Rohan. “Next time,” Éomer whispered as they crept back to their chambers, “we’ll try the cheese.”

Writing Sheet

The moon cast a silvery glow over Meduseld, its light filtering through the high windows to illuminate the grand halls of the Golden Hall. Éomer, the formidable King of Rohan, found himself tiptoeing like a child on a dare, his hand clasped firmly in Lothíriel’s, whose laughter was a soft melody in the silence..... “Are you sure this is wise, my love?” “Wise? No. Fun? Absolutely,” she replied, her laughter a soft ripple in the silence. Éomer shook his head, a reluctant smile tugging at his lips as he watched her nimble fingers work to untie the savory prize. He was a warrior, a king, yet here he was, caught in the delightful absurdity of this secretive adventure, his heart light with the thrill of it all. “Besides,” Lothíriel continued, handing him a piece of the cured venison with a flourish, “what’s the worst that could happen? A tale of the gallant King brought low by his own appetite?” Éomer took the offered morsel, his grin widening as he tasted the rich, smoky flavor. “Perhaps the bards will sing of our escapades instead of my battles,” he mused, the thought surprisingly pleasing.As they slipped back into the corridors, leaving the pantry and its shadows behind, Éomer realized that it was not the venison he would remember, but the adventure, the laughter, and the love that had made the night truly unforgettable.

Table 18: Qualitative Example where the Average Author method is preferred over Writing Sheet by all three annotators for similarity to the ground-truth author story for an AO3 author.

Writing Prompt

"In a desert town under the watchful eyes of royal guards and oppressive banners, you and your team have five minutes to locate a mysterious contact in a pink house before chaos erupts—failure is not an option."

Ground-truth Author Story

Chapter 1: Danger Close *La Makan, 12:54 standard time* Wind whistled through the close streets of *La Makan*, stirring grains of sand with all the effect of a man attempting to blow salt through eternity. It whipped around the corners of the alleys, rustling banners hanging from balconies and glassless windows. It looked for something, a thing it would never find.... Either way wouldn't end well for them. Our contact gave us an area, but not an address. We have, he checked his watch, five minutes until the distraction starts. We need to find them and get them out. Problem is, we don't know what they look like, only that their house is pink. He glanced over his shoulder at the multicolored buildings. Any one of the scoured pink buildings could've been their one. "Vic, you knew Xitor the best of any of us. I'm trusting you to get us there. Everyone else, let's keep our hats on, kay?"

Average Author

The sun hung low in the sky, casting long shadows across the dusty streets of the desert town of Vespera. Time was of the essence; you had five minutes to locate your mysterious contact before chaos erupted. Failure was not an option. "Stay sharp," you whispered to your team, your voice barely audible over the din of the market. "But time is short. We must act quickly." The weight of the moment settled over you like a heavy mantle. The fate of Vespera rested on the success of this meeting. As the figure began to speak, outlining the plan that would either save or doom the town, you couldn't shake the feeling that this was only the beginning. The real challenge was yet to come.

Writing Sheet

The sun beat down mercilessly, casting a harsh glare on the town's whitewashed walls. The narrow alleys were alive with whispers and hurried footsteps, each person a part of the unfolding drama. My team and I moved through the bustling streets, the oppressive presence of royal guards a constant reminder of the stakes. We had five minutes—no more, no less—to locate the contact in the elusive pink house before chaos erupted. The memory of a previous mission flickered in my mind: the sun setting behind the dunes, the sound of distant drums, and the rush of adrenaline as we narrowly escaped a similar fate. That mission had gone wrong, leaving scars that still haunted my dreams. Failure was not an option today... Outside, the tension remained, a silent storm waiting to break. But for now, we had succeeded. The town's frenetic energy continued, unaware of our brief triumph. The banners flapped, the guards watched, and the countdown to chaos continued, but we had found our mark. The mission was still on course, and the desert town held its breath, waiting for the next move.

Table 19: Qualitative Example where all three annotators select 'Tie' for similarity to the author story of a Storium author.

Writing Prompt

"When the word 'hospice' is first spoken, it feels like the air itself changes, heavy with finality. How do you create light in a space where hope seems to have vanished?"

Ground-truth Author Story

"Hospice." Once the word is uttered aloud, there is a seismic shift. You will feel it. Like a (very short) thread through the eye of a needle, swiftly in and swiftly out. The air itself becomes thin, steely. At the periphery of your vision, an immediate dimming. The penumbra begins to shrink. In time, it will become a tunnel. Ever diminishing. Until the remaining light is small enough to be cupped in two hands. And then it will be extinguished. For when "hospice" is spoken, the fact is at last acknowledged: There is no hope. No hope. These words are obscene, unspeakable.... Well, I will try! When he is at home, possibly his appetite will return. When I am the one to prepare his food, his appetite will return, I am sure. Of course, family will come to visit. Adult children, grandchildren. Relatives, friends. Colleagues from the university. Neighbors. Old friends from grammar school he hasn't seen in fifty years. Some surprises for him—I will negotiate with the imagination of a theatre director. Not merely hospice but our hospice. Not sad but joyous, a honeymoon. We will be happy there, in our own home. Both of us. For both of us, the "final days" will be a honeymoon. I vow. In fact, nothing remotely like this will happen. How could you have imagined it would! Hospice, yes. Honeymoon, no.

Average Author

"When the word 'hospice' is first spoken, it feels like the air itself changes, heavy with finality...It's her mother, Marjorie, who the doctor is addressing, but the word reverberates through Clara's own heart, a dull thud of inevitability." Marjorie stares at the doctor with a mix of resignation and defiance, her once-vibrant green eyes now clouded by the long battle with illness..... Her touch is light, almost ethereal, and Clara feels a sudden rush of tears she struggles to hold back. "Clara," Marjorie says softly, her voice barely a whisper. "Do you remember the garden?" Clara nods, unable to speak. The garden had been Marjorie's sanctuary, a riot of color and life where she had spent countless hours tending to roses, tulips, and wildflowers..... Marjorie's decline is gradual but inevitable, and Clara feels the weight of each passing day. She continues to read to her mother, to sit by her side, and to hold her hand through the long nights. One crisp morning, as the first frost dusts the garden in a delicate shimmer, Marjorie slips away. Clara is by her side, her hand still entwined with her mother's, and she feels a profound stillness settle over her.....

Writing Sheet

Every morning, Nurse Clara began her rounds at St. Mary's Hospice, a place where the word "hospice" hung in the air like a thick, unspoken truth. Her day started with the same cycle: a clipboard in hand, she moved from room to room, her steps echoing softly in the quiet corridors. Each door held a story, a life in its final chapters, and as she entered each room, she would ask the same question, "How are you feeling today?" The responses were as varied as the lives they represented. Some patients greeted her with a weary smile, others with a silent nod. But there was one patient, Mr. Thompson, who never failed to reply with a simple, "I'm just waiting." Clara had come to understand that "waiting" was an ambiguous term within these walls. It held a duality of meaning: waiting for relief, waiting for peace, waiting for the inevitable....Clara knew that the work was not about erasing the pain or the grief, but about finding moments of grace within it. It was about guiding others, and herself, to a place where hope could be redefined—not as a denial of reality, but as an acceptance of it, and the peace that such acceptance could bring. With each cycle of her rounds, Clara realized that the light had always been there, waiting to be uncovered, and that she had the power to help others see it too.

Table 20: Qualitative Example where all annotators select different winners for similarity to the author story of a New Yorker author.
