## A GENERALISATION OF AN OSTROWSKI INEQUALITY IN INNER PRODUCT SPACES

SEVER S. DRAGOMIR AND ANCA C. GOŞA

ABSTRACT. A generalisation of inner product spaces of an inequality due to Ostrowski and applications for sequences and integrals are given.

## 1. Introduction

In 1951, A.M. Ostrowski [2, p. 289] obtained the following result (see also [1, p. 92]).

**Theorem 1.** Suppose that  $\mathbf{a} = (a_1, \dots, a_n)$ ,  $\mathbf{b} = (b_1, \dots, b_n)$  and  $\mathbf{x} = (x_1, \dots, x_n)$  are real n-tuples such that  $\mathbf{a} \neq 0$  and

(1.1) 
$$\sum_{i=1}^{n} a_i x_i = 0 \quad and \quad \sum_{i=1}^{n} b_i x_i = 1.$$

Then

(1.2) 
$$\sum_{i=1}^{n} x_i^2 \ge \frac{\sum_{i=1}^{n} a_i^2}{\sum_{i=1}^{n} a_i^2 \sum_{i=1}^{n} b_i^2 - (\sum_{i=1}^{n} a_i b_i)^2},$$

with equality if and only if

(1.3) 
$$x_k = \frac{b_k \sum_{i=1}^n a_i^2 - a_k \sum_{i=1}^n a_i b_i}{\sum_{i=1}^n a_i^2 \sum_{i=1}^n b_i^2 - \left(\sum_{i=1}^n a_i b_i\right)^2}, \quad k = 1, \dots, n.$$

Another similar result due to Ostrowski which is far less known and obtained in the same work [2, p. 130] (see also [1, p. 94]), is the following one.

**Theorem 2.** Let  $\mathbf{a}$ ,  $\mathbf{b}$  and  $\mathbf{x}$  be n-tuples of real numbers with  $\mathbf{a} \neq 0$  and

(1.4) 
$$\sum_{i=1}^{n} a_i x_i = 0 \quad and \quad \sum_{i=1}^{n} x_i^2 = 1.$$

Then

(1.5) 
$$\frac{\sum_{i=1}^{n} a_i^2 \sum_{i=1}^{n} b_i^2 - \left(\sum_{i=1}^{n} a_i b_i\right)^2}{\sum_{i=1}^{n} a_i^2} \ge \left(\sum_{i=1}^{n} b_i x_i\right)^2.$$

If a and b are not proportional, then the equality holds in (1.5) iff

$$(1.6) x_k = q \cdot \frac{b_k \sum_{i=1}^n a_i^2 - a_k \sum_{i=1}^n a_i b_i}{\left(\sum_{k=1}^n a_k^2\right)^{\frac{1}{2}} \left[\sum_{i=1}^n a_i^2 \sum_{i=1}^n b_i^2 - \left(\sum_{i=1}^n a_i b_i\right)^2\right]^{\frac{1}{2}}}, k \in \{1, \dots, n\},$$

Date: May 19, 2003.

Key words and phrases. Ostrowski's inequality, Inner products.

with  $q \in \{-1, 1, \}$ .

The case of equality which was neither mentioned in [1] nor in [2] is considered in Remark 1.

In the present paper, by the use of an elementary argument based on Schwarz's inequality, a natural generalisation in inner-product spaces of (1.5) is given. The case of equality is analyzed. Applications for sequences and integrals are also provided.

## 2. The Results

The following theorem holds:

**Theorem 3.** Let  $(H, \langle \cdot, \cdot \rangle)$  be a real or complex inner product space and  $a, b \in H$  two linearly independent vectors. If  $x \in H$  is such that

$$\langle x, a \rangle = 0 \text{ and } ||x|| = 1,$$

then

(2.1) 
$$\frac{\|a\|^2 \|b\|^2 - |\langle a, b \rangle|^2}{\|a\|^2} \ge |\langle x, b \rangle|^2.$$

The equality holds in (2.1) iff

(2.2) 
$$x = \nu \left( b - \frac{\overline{\langle a, b \rangle}}{\|a\|^2} \cdot a \right),$$

where  $\nu \in \mathbb{K} (\mathbb{C}, \mathbb{R})$  is such that

(2.3) 
$$|\nu| = \frac{\|a\|}{\left[\|a\|^2 \|b\|^2 - |\langle a, b \rangle|^2\right]^{\frac{1}{2}}}.$$

*Proof.* We use Schwarz's inequality in the inner product space H, i.e.,

$$||u||^2 ||v||^2 \ge |\langle u, v \rangle|^2, \quad u, v \in H$$

with equality iff there is a scalar  $\alpha \in \mathbb{K}$  such that

$$(2.5) u = \alpha v$$

If we apply (2.4) for  $u=z-\frac{\langle z,c\rangle}{\|c\|^2}\cdot c,\,v=d-\frac{\langle d,c\rangle}{\|c\|^2}\cdot c,$  where  $c\neq 0$  and  $c,d,z\in H,$  and taking into account that

$$\left\| z - \frac{\langle z, c \rangle}{\|c\|^2} \cdot c \right\|^2 = \frac{\|z\|^2 \|c\|^2 - |\langle z, c \rangle|^2}{\|c\|^2},$$

$$\left\| d - \frac{\langle d, c \rangle}{\|c\|^2} \cdot c \right\|^2 = \frac{\|d\|^2 \|c\|^2 - |\langle d, c \rangle|^2}{\|c\|^2}$$

and

$$\left\langle z - \frac{\left\langle z, c \right\rangle}{\left\| c \right\|^2} \cdot c, d - \frac{\left\langle d, c \right\rangle}{\left\| c \right\|^2} \cdot c \right\rangle = \frac{\left\langle z, d \right\rangle \left\| c \right\|^2 - \left\langle z, c \right\rangle \left\langle c, d \right\rangle}{\left\| c \right\|^2},$$

we deduce the inequality

$$(2.6) \qquad \left\lceil \left\|z\right\|^{2} \left\|c\right\|^{2} - \left|\langle z, c \rangle\right|^{2} \right\rceil \left\lceil \left\|d\right\|^{2} \left\|c\right\|^{2} - \left|\langle d, c \rangle\right|^{2} \right\rceil \geq \left|\langle z, d \rangle \left\|c\right\|^{2} - \langle z, c \rangle \langle c, d \rangle\right|^{2}$$

with equality iff there is a  $\beta \in \mathbb{K}$  such that

(2.7) 
$$z = \frac{\langle z, c \rangle}{\|c\|^2} \cdot c + \beta \left( d - \frac{\langle d, c \rangle}{\|c\|^2} \cdot c \right).$$

If in (2.6) we choose z = x, c = a and d = b, where a and x statisfy (i), then we deduce

$$||a||^2 \left[ ||a||^2 ||b||^2 - |\langle a, b \rangle|^2 \right] \ge \left[ \langle x, b \rangle ||a||^2 \right]^2$$

which is clearly equivalent to (2.1).

The equality holds in (2.1) iff

$$x = \nu \left( b - \frac{\overline{\langle a, b \rangle}}{\|a\|^2} \cdot a \right),$$

where  $\nu \in \mathbb{K}$  satisfies the condition

$$(2.8) 1 = ||x|| = |\nu| \left| \left| b - \frac{\overline{\langle a, b \rangle}}{\left| |a| \right|^2} \cdot a \right| = |\nu| \left[ \frac{\left| |a| \right|^2 \left| |b| \right|^2 - \left| \langle a, b \rangle \right|^2}{\left| |a| \right|^2} \right]^{\frac{1}{2}},$$

and the theorem is thus proved.

The following particular cases hold.

1. If  $\mathbf{a}, \mathbf{b}, \mathbf{x} \in \ell^2(\mathbb{K}), \mathbb{K} = \mathbb{C}, \mathbb{R}$ , where

$$\ell^{2}\left(\mathbb{K}\right) := \left\{ x = \left(x_{i}\right)_{i \in \mathbb{N}}, \sum_{i=1}^{\infty} \left|x_{i}\right|^{2} < \infty \right\}$$

with a, b linearly independent and

(a) 
$$\sum_{i=1}^{\infty} x_i \overline{a_i} = 0, \quad \sum_{i=1}^{\infty} |x_i|^2 = 1,$$

then

(2.9) 
$$\frac{\sum_{i=1}^{\infty} |a_i|^2 \sum_{i=1}^{\infty} |b_i|^2 - \left| \sum_{i=1}^{\infty} a_i \overline{b_i} \right|^2}{\sum_{i=1}^{\infty} |a_i|^2} \ge \left| \sum_{i=1}^{\infty} x_i \overline{b_i} \right|^2.$$

The equality holds in (2.9) iff

(2.10) 
$$x_{i} = \nu \left[ b_{i} - \frac{\sum_{k=1}^{\infty} a_{k} \overline{b_{k}}}{\sum_{k=1}^{\infty} |a_{k}|^{2}} \cdot a_{i} \right], \quad i \in \{1, 2, \dots\}$$

with  $\nu \in \mathbb{K}$  is such that

(2.11) 
$$|\nu| = \frac{\left(\sum_{k=1}^{\infty} |a_k|^2\right)^{\frac{1}{2}}}{\left[\sum_{k=1}^{\infty} |a_k|^2 \sum_{k=1}^{\infty} |b_k|^2 - \left|\sum_{k=1}^{\infty} a_k \overline{b_k}\right|^2\right]^{\frac{1}{2}}}.$$

**Remark 1.** The case of equality in (1.5) is obviously a particular case of the above. We omit the details.

**2.** If  $f, g, h \in L^2(\Omega, m)$ , where  $\Omega$  is an m-measurable space and

$$L^{2}\left(\Omega,m\right):=\left\{ f:\Omega\rightarrow\mathbb{K},\ \int_{\Omega}\left|f\left(x\right)\right|^{2}dm\left(x\right)<\infty\right\} ,$$

with f, q being linearly independent and

(2.12) 
$$\int_{\Omega} h(x) \overline{f(x)} dm(x) = 0, \quad \int_{\Omega} |h(x)|^2 dm(x) = 1,$$

ther

$$(2.13) \quad \frac{\int_{\Omega} |f(x)|^{2} dm(x) \int_{\Omega} |g(x)|^{2} dm(x) - \left| \int_{\Omega} f(x) \overline{g(x)} dm(x) \right|^{2}}{\int_{\Omega} |f(x)|^{2} dm(x)} \\ \geq \left| \int_{\Omega} h(x) \overline{g(x)} dm(x) \right|^{2}.$$

The equality holds in (2.13) iff

$$h\left(x\right) = \nu \left[g\left(x\right) - \frac{\int_{\Omega} g\left(x\right) \overline{f\left(x\right)} dm\left(x\right)}{\int_{\Omega} \left|f\left(x\right)\right|^{2} dm\left(x\right)} f\left(x\right)\right] \quad \text{for a.e. } x \in \Omega$$

and  $\nu \in \mathbb{K}$  with

$$|\nu| = \frac{\left(\int_{\Omega} |f(x)|^2 dm(x)\right)^{\frac{1}{2}}}{\left[\int_{\Omega} |f(x)|^2 dm(x) \int_{\Omega} |g(x)|^2 dm(x) - \left|\int_{\Omega} f(x) \overline{g(x)} dm(x)\right|^2\right]^{\frac{1}{2}}}.$$
