Erratum: Eur. Phys. J. C 12 (2000) 109. Abstract

It has been recently shown [2] that the values of J_T and J_L which appear in Eq.(2) and (5) are too large by a factor of 4, in the Ref. [1]. Correcting for this changes the Fig. 2 (see below). More-over, now the emissions from the quark matter dominate only for $p_T < 1$ GeV/ c . The basic result of the paper, that the upper limit of the single-photon production is consistent with the rates for photon production at two-loop level remains valid.
